BMC Software is alerting users of version 2.3.15 of the Installation System to several enhancements. If you have any questions about this technical bulletin, contact Customer Support at 800 537 1813 (United States or Canada) or call your local support center.

The enhancements apply to specific products only as described in each section.

Next Generation Logger (NGL) option ................................................................. 1
Runtime/SMPE Customization Instance panel..................................................... 2
DB2 Product Configuration component .............................................................. 2
Catalog indirection.............................................................................................. 2
FMIDSETs............................................................................................................. 3
Documentation changes ..................................................................................... 3

Next Generation Logger (NGL) option

When customizing any of the following BMC products, you now have the option of naming a unique product instance identifier (PIID) for NGL that is different from the DBC SSID:

- BMC System Performance for DB2
  - APPTUNE for DB2
  - MainView for DB2
  - Pool Advisor for DB2
  - SQL Performance for DB2
- MainView for DB2 Data Collector Component
- MainView Transaction Analyzer
The Runtime/SMPE Customization Instance - DBC and NGL Component Services panel is now two separate panels:

- Runtime/SMPE Customization Instance - DBC Component Services
- Runtime/SMPE Customization Instance - NGL Component Services

This change applies when customizing any of the following BMC products:

- BMC System Performance for DB2 (version 10.1.00 and later)
  - MainView for DB2 (version 10.1.00 and later)
  - Pool Advisor for DB2 (version 10.1.00 and later)
  - MainView for DB2 Data Collector Component (version 10.1.00 and later)
- BMC SQL Performance for DB2 (version 10.1.00 and later)
  - APPTUNE for DB2 (version 10.1.00 and later)
- MainView Transaction Analyzer (version 3.2.00 and later)

**NOTE**

The product installation guides will be updated in the next release to refer to the panels individually.

The name of the BMC Product Management (BPM) component is now the DB2 Product Configuration component (FMID ZLGCxxx). The Installation System reflects this change in the installation panels and associated Help.

Catalog indirection

Catalog indirection is now supported for version 10.1.00 of ALTER for DB2, CATALOG MANAGER for DB2, and CHANGE MANAGER for DB2 on a DB2 Version 10 subsystem in new-function mode (NFM).
FMIDSETs

For products that contain the ZDIG190 FMID as part of an FMIDSET (primarily BMC products for DB2), attempting to run an apply check job ($B75APCF or $B80APCP) or an apply job ($B76APLF or $B81APLP) no longer results in an error.

Documentation changes

In some cases, the installation guide refers to “installing only MainView products (except for MainView for DB2).” If you are customizing the products to execute from runtime data sets, the exception should say “(except for MainView for DB2 and MainView Transaction Analyzer).”

Similarly, references to “installing MainView products (which includes MainView for DB2)” should say “installing MainView products (including MainView for DB2 and MainView Transaction Analyzer).”

Where to view the latest product information

You can view the latest product documentation, including notices, on the BMC Support Central website. To receive e-mail messages when BMC issues new notices, subscribe to proactive alerts on the support website http://www.bmc.com/support. You can also use this site to search for additional product resolutions and frequently asked questions (FAQs).
