A serious problem in the following products requires immediate attention:

- APPTUNE for DB2®
- SQL Performance for DB2
- System Performance for DB2

**Issue**

If you view the following APPTUNE, SQL Performance, or System Performance reports on an IBM® DB2 Version 8 or Version 9 subsystem, a 1-byte overlay might occur in the DB2 DBM1 address space:

<table>
<thead>
<tr>
<th>Product</th>
<th>Report name</th>
<th>Access method</th>
</tr>
</thead>
<tbody>
<tr>
<td>APPTUNE or SQL Performance</td>
<td>SQMSYSSM</td>
<td>You access the report by selecting a DB2 subsystem with the <strong>S-Subsystem</strong> action from the DB2 Status report SQMSYSMN.</td>
</tr>
<tr>
<td>System Performance</td>
<td>SPDSUM</td>
<td>You access the report by pressing <strong>Enter</strong> while the cursor is positioned on a DB2 subsystem on the SYSPLEX DB2 MONITOR report SPDMAIN.</td>
</tr>
</tbody>
</table>
|                          |             | The report is also located in the MainView for DB2 Data Collector CLIST. You access the report by hyperlinking to it from the DB2 Solutions screen in MainView or by launching the report directly from TSO.
Resolution

PTF BPU3900 resolves this issue.

BMC recommends using BMC Internet Service Retrieval (ISR) to obtain PTFs. However, you can also obtain them from eFix PTF Distribution Services (eFix); you can access eFix directly at http://apps.bmc.com/support/efix.cgi or from the support site.
