A serious problem in the ALTER and CHANGE MANAGER products requires immediate attention.

**Issue**

When the following conditions exist, the product might not load all of the data in a table space:

- The product is using the BMC UNLOAD PLUS for DB2 and LOADPLUS for DB2 utilities to multitask unloading and loading data in a partitioned table space.
- The table space contains more than 255 partitions, and at least one of them uses data compression.
- A change to a limit key or deletion of a partition requires that the product drop and re-create the object.

In response, the product creates the load worklist commands incorrectly, which might result in lost data.

**Resolution**

Table 1 lists the PTFs that resolve this issue. The PTFs address this issue by not multitasking the unloading and loading of data.

<table>
<thead>
<tr>
<th>Version</th>
<th>PTF</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.3.00</td>
<td>BPU5180</td>
</tr>
<tr>
<td>10.1.00</td>
<td>BPU5181</td>
</tr>
</tbody>
</table>
BMC recommends using BMC Internet Service Retrieval (ISR) to obtain PTFs. For information about ISR, see your product’s installation guide.

You can also obtain PTFs from eFix PTF Distribution Services (eFix). You can access eFix directly at http://apps.bmc.com/support/efix.cgi or from the support site.

**NOTE**

If you have questions, contact Customer Support at 1 800 537 1813 (United States or Canada) or call your local support center.
