Log Master for DB2
Version 11.1.00
October 8, 2014
Tracking number QM001859757: Data loss might occur during batch processing if you use UNIT OF RECOVERY or LUW UNIQUE VALUE predicates in a LOGSCAN filter

A serious problem in the Log Master for DB2 product requires immediate attention.

Issue

Data loss might occur when you are processing a LOGSCAN that includes a WHERE clause or filter that contains either of the following:

- A UNIT OF RECOVERY predicate specifying a non-extended LRSN (12 hexadecimal digits), for example, WHERE UNIT OF RECOVERY = X'CDD08D2E4499'
- A LUW UNIQUE VALUE predicate, for example, WHERE LUW UNIQUE VALUE = X'CDD6B9D5B481'

Resolution

PTF BPU7332 resolves this issue.

In addition, this PTF also corrects the specification of the predicates in JCL generated using the Log Master online interface.

BMC recommends using BMC Internet Service Retrieval (ISR) to obtain PTFs. For information about ISR, see the maintenance information in the Installation System documentation.

You can also obtain PTFs from eFix PTF Distribution Services (eFix). You can access eFix directly at http://apps.bmc.com/support/efix.cgi or from the support site. For information about eFix, see the online Help.
Note
If you have questions, contact Customer Support at 1 800 537 1813 (United States or Canada) or call your local support center.

Where to get the latest product information

To view the latest BMC documents, see the Support Central website at http://www.bmc.com/support.

Notices such as flashes, technical bulletins, and release notes are available on the website. You can subscribe to proactive alerts to receive e-mail messages when notices are issued or updated. For more information about proactive alerts, see the Support Central website.
