BMC Products for DB2
January 14, 2015
BMC announces licensing permission for running BMC products and solutions for DB2 in IBM zPDT environments

For all supported versions of the BMC products and solutions for DB2, BMC is announcing licensing permission for the IBM System z Personal Development Tool (zPDT) technology.

If you are licensed to run these products or solutions on a real IBM z/OS system, you can also run them in a virtual zPDT environment—with no additional contract terms or fees required. Limitations are as follows:

■ You must be the owner and operator of the zPDT on which you are running licensed BMC products.

■ BMC Customer Support will not accept reported issues that occur in the virtual environment. If you discover an issue, you must re-create it on a real z/OS system and report the issue based on the results from the real system.

Note
zPDT is a tool that enables a virtual System z environment. IBM limits activities in a zPDT environment to System z application development, testing, education, and demonstration. Production activities are specifically excluded.
For information about the zPDT, see https://www-304.ibm.com/partnerworld/wps/servlet/ContentHandler/pw_com_zpdt or the IBM website (http://www.ibm.com).

If you have questions, contact Customer Support at 1 800 537 1813 (United States or Canada) or call your local support center.

To view the latest BMC documents, see the Support Central website at http://www.bmc.com/support. Notices such as flashes, technical bulletins, and release notes are available on the website. You can subscribe to proactive alerts to receive e-mail messages when notices are issued or updated. For more information about proactive alerts, see the Support Central website.
