LOADPLUS for DB2
Version 11.1.00
February 28, 2015
Tracking number QM001870864: When loading inline LOB data, LOADPLUS might load incorrect data

A serious problem in the LOADPLUS for DB2 product requires immediate attention.

Issue

When one of the following conditions exists, LOADPLUS might load incorrect data but complete without an indication of the problem:

- You are loading an inline LOB column but you did not specify SPANNED YES. After you apply the PTF cited in this flash, LOADPLUS will invoke DSNUTILB to handle this situation.

- You are loading an inline LOB column (specifying SPANNED YES) and the LOB column is not in the input data set. The inline LOB column might not be in the input data set, for example, if the column was added via an ALTER statement.

Resolution

PTF BPU7561 resolves this issue.

BMC recommends using BMC Internet Service Retrieval (ISR) to obtain PTFs. For information about ISR, see the maintenance information in the Installation System documentation.

You can also obtain PTFs from eFix PTF Distribution Services (eFix). You can access eFix directly at http://apps.bmc.com/support/efix.cgi or from the support site. For information about eFix, see the online Help.
If you have questions, contact Customer Support at 1 800 537 1813 (United States or Canada) or call your local support center.
