DB2 Solution Common Code (SCC)
Version 11.1.00
April 22, 2015
Tracking number ISS04455176: PTF BPJ0944 has been marked as a PTF in error (PE)

BMC is alerting users to a problem in the DB2 Solution Common Code (SCC) component.

Affected products

The SCC component provides common processes that support several BMC products for the IBM DB2 environment. This problem affects all supported versions of the following products and solutions that use SCC version 11.1.00.

Note
Some of the products or solutions in this list can use SCC indirectly, by using another product or component that includes SCC.

- COPY PLUS for DB2
- DASD MANAGER PLUS for DB2
- BMC Database Administration for DB2
- BMC Database Performance for DB2
- BMC High Speed Utilities for DB2
- Log Master for DB2
- BMC Object Administration for DB2
- BMC Performance for DB2 Databases
- BMC Recovery for DB2
- BMC Recovery Management for DB2
- RECOVER PLUS for DB2
Issue

SCC PTF BPJ0944 is missing a HOLD statement and has been marked as a PTF in error (PE). If you have applied this PTF, you might see unpredictable results.

All affected products will return the following message, but you might experience additional messages:

```
SQL CODE -206, ERROR: INC_ARCHIVE IS NOT VALID IN THE CONTEXT WHERE IT IS USED
```

Known returned messages from the BMCSTATS component of DASD MANAGER PLUS are as follows, but you might experience additional messages:

```
SQL CODE -805 AT STATEMENT NUMBER 162 (DBRM SCCQTMP)
```

Resolution

Apply correcting PTF BPJ1005, which BMC plans to make available on or around April 24, 2015.

The crucial missing HOLDDATA from PTF BPJ0944 is that changes to BMCUTIL.CMN_OS_DEF require a new column to be added as follows:

```
ALTER TABLE BMCUTIL.CMN_OS_DEF
ADD INC_ARCHIVE CHAR(1) NOT NULL WITH DEFAULT 'N';
COMMIT;
```

For more information about the missing HOLDDATA, see the instructions in correcting PTF BPJ1005 or APAR BAJ1019.
