A serious problem in the REORG PLUS for DB2 product requires immediate attention.

*Note*

BMC previously announced this problem in a flash dated April 14, 2015. A PTF to correct the problem is now available.

### Issue

A REORG PLUS reorganization might result in a corrupted table space when the following conditions exist:

- BMC PTF BPU7539 is applied on your system.

  *Note*

  This PTF was available on March 12, 2015.

- You are reorganizing a universal table space (UTS) that was created with a DSSIZE of 4 GB.

- Any data set in the table space is full.

Symptoms of this problem include 00C90101 abends on subsequent attempts to access this table space, such as when running the RUNSTATS utility.

### Resolution

Complete the following procedure:

1. Apply PTF BPU7662, including all of its prerequisites.
BMC recommends using BMC Internet Service Retrieval (ISR) to obtain PTFs. For information about ISR, see the maintenance information in the *Installation System Reference Manual*. You can also obtain PTFs from eFix PTF Distribution Services (eFix). You can access eFix directly at [http://apps.bmc.com/support/efix.cgi](http://apps.bmc.com/support/efix.cgi) or from the support site. For information about eFix, see the online Help.

2 Correct any table spaces that were affected by the problem:

a Identify potentially affected table spaces based on the information in “Issue” on page 1.

b Run the RUNSTATS utility on those table spaces by using the following syntax:

```sql
RUNSTATS TABLESPACE tableSpaceName
```

The utility abends when run against affected table spaces.

c Recover the affected table spaces, using your organization’s standard procedure.
