APPTUNE for DB2, SQL Performance for DB2
Version 11.2.00
January 14, 2016
Tracking number QM001885979: After you migrate to version 11.2.00, APPTUNE might stop monitoring SQL

BMC is alerting users to a problem in the following products:
■ APPTUNE for DB2
■ SQL Performance for DB2

Issue

APPTUNE does not monitor SQL when the following conditions exist:
■ In an earlier version of APPTUNE, you specified Skip Collection=N in a filter panel.
■ You migrated from an earlier version to version 11.2 of APPTUNE.

The migration process incorrectly sets the Monitor SQL option to N. Consequently, the product does not monitor SQL.

Resolution

PTFs BPU8328, BPU8329, and BPJ1179 resolve this issue.

After you apply BPU8328 and BPU8329, APPTUNE does the following when it activates a filter that was migrated incorrectly:

■ Adjusts the Monitor SQL option on each filter row to the correct setting
■ Issues message BMC23139 in the DB2 Component Services (DBC) log to indicate that it made an adjustment

To prevent the product from issuing message BMC23139, edit and save the filter.

After you apply all three PTFs, the migration process correctly translates the filter settings.
BMC recommends using BMC Internet Service Retrieval (ISR) to obtain PTFs. For information about ISR, see the maintenance information in the *Installation System Reference Manual*.

You can also obtain PTFs from eFix PTF Distribution Services (eFix). You can access eFix directly at [http://efix.bmc.com](http://efix.bmc.com) or from the support site. For information about eFix, see the online Help.
