If the CAS terminates, the iCap PAS that is connected to the CAS also terminates

Overview of the enhancement

A change in the iCap product ensures that if the coordinating address space (CAS) terminates, the iCap product address space (PAS) that is connected to the CAS also terminates.

Once the CAS terminates, the iCap PAS cannot continue to manage the defined capacities (DCs) of LPARs and group capacity limits (GCLs) until the CAS restarts. By terminating the PAS when the CAS terminates, iCap ensures that DCs and GCLs are correctly restored.

To restart the iCap PAS, take one of the following actions:

- Restart the CAS, and then manually restart the PAS.
- Specify a PAS START command in the CAS JCL. This method automatically restarts the PAS each time the CAS restarts.

Obtaining the enhancement

PTF BQY0931 enables this enhancement.

BMC recommends using BMC Internet Service Retrieval (ISR) to obtain PTFs. For information about ISR, see the maintenance information in the Installation System Reference Manual.

You can also obtain PTFs from eFix PTF Distribution Services (eFix). You can access eFix directly at http://efix.bmc.com or from the support site. For information about eFix, see the online Help.
Note
If you have questions, contact Customer Support at 1 800 537 1813 (United States or Canada) or call your local support center.

Where to get the latest product information

To view the latest BMC documents, see the Support Central website at http://www.bmc.com/support.

Notices such as flashes, technical bulletins, and release notes are available on the website. You can subscribe to proactive alerts to receive e-mail messages when notices are issued or updated. For more information about proactive alerts, see the Support Central website.
