

FootPrints 12.1.09

Table Of Contents

Alphabetical list of tables	1
Entity/Table(s) of Model "Renoir Domain Model Detail"	9
Attribute/Column(s) of Entity/Table ":Item_Shortname Balance"	46
Attribute/Column(s) of Entity/Table ":item_shortname Event Sum"	47
Attribute/Column(s) of Entity/Table ":item_shortname Status"	48
Attribute/Column(s) of Entity/Table ":item_shortname Transition"	49
Attribute/Column(s) of Entity/Table ":item_shortname Transition Sum"	49
Attribute/Column(s) of Entity/Table "Activity Definition"	50
Attribute/Column(s) of Entity/Table "Added Column"	50
Attribute/Column(s) of Entity/Table "Added Table"	50
Attribute/Column(s) of Entity/Table "Address Book Container"	51
Attribute/Column(s) of Entity/Table "Address Book Option"	51
Attribute/Column(s) of Entity/Table "Address Book Permission Type"	51
Attribute/Column(s) of Entity/Table "Address Book Type"	51
Attribute/Column(s) of Entity/Table "Address Field"	52
Attribute/Column(s) of Entity/Table "Address Field Type"	52
Attribute/Column(s) of Entity/Table "Address Field Type Option"	52
Attribute/Column(s) of Entity/Table "Administrator CMDB Role"	53
Attribute/Column(s) of Entity/Table "Administrator Type"	53
Attribute/Column(s) of Entity/Table "Agent"	53
Attribute/Column(s) of Entity/Table "Agent Authentication Type"	53
Attribute/Column(s) of Entity/Table "Agent Profile"	53
Attribute/Column(s) of Entity/Table "Agent Role"	53
Attribute/Column(s) of Entity/Table "Agent Team"	54
Attribute/Column(s) of Entity/Table "Agent Type"	54
Attribute/Column(s) of Entity/Table "Alert Role Type"	54
Attribute/Column(s) of Entity/Table "Anonymous Customer"	54
Attribute/Column(s) of Entity/Table "Anonymous Customer Profile"	54
Attribute/Column(s) of Entity/Table "Application Element"	55
Attribute/Column(s) of Entity/Table "Application Element Definition"	55
Attribute/Column(s) of Entity/Table "Application Element Namespace"	55
Attribute/Column(s) of Entity/Table "Application Element String"	55
Attribute/Column(s) of Entity/Table "Application Element String Usage"	56
Attribute/Column(s) of Entity/Table "Application Element Type"	56
Attribute/Column(s) of Entity/Table "Application Role"	56
Attribute/Column(s) of Entity/Table "Application User"	57
Attribute/Column(s) of Entity/Table "Application User Profile Link"	57
Attribute/Column(s) of Entity/Table "Asset Core"	58
Attribute/Column(s) of Entity/Table "Asset Core Column"	58
Attribute/Column(s) of Entity/Table "Asset Item"	58
Attribute/Column(s) of Entity/Table "Assignment"	58
Attribute/Column(s) of Entity/Table "Assignment Type"	59
Attribute/Column(s) of Entity/Table "Association Type"	60
Attribute/Column(s) of Entity/Table "Attach Files"	60
Attribute/Column(s) of Entity/Table "Audit Event Type"	60
Attribute/Column(s) of Entity/Table "Audit Field Configuration"	60
Attribute/Column(s) of Entity/Table "Audit Log"	61
Attribute/Column(s) of Entity/Table "Audit Message Template"	62
Attribute/Column(s) of Entity/Table "Audit Property Change"	62
Attribute/Column(s) of Entity/Table "Audit Property Dimension"	63
Attribute/Column(s) of Entity/Table "Audit Rule Name"	63
Attribute/Column(s) of Entity/Table "Audit Trail"	64
Attribute/Column(s) of Entity/Table "Audit Transaction"	64
Attribute/Column(s) of Entity/Table "Audit Transaction Audit Trail"	65
Attribute/Column(s) of Entity/Table "Authentication Method"	65
Attribute/Column(s) of Entity/Table "Authentication Method Type"	65
Attribute/Column(s) of Entity/Table "Auto Add Customer Profile"	65
Attribute/Column(s) of Entity/Table "Broadcast Alert"	65
Attribute/Column(s) of Entity/Table "Broadcast Message"	66
Attribute/Column(s) of Entity/Table "Broadcast Message Type"	66
Attribute/Column(s) of Entity/Table "Built_in_level"	66
Attribute/Column(s) of Entity/Table "Business Process"	66
Attribute/Column(s) of Entity/Table "Business Process Definition"	67
Attribute/Column(s) of Entity/Table "Business Rule"	67
Attribute/Column(s) of Entity/Table "Business Rule Association"	67
Attribute/Column(s) of Entity/Table "Business Rule Association Type"	67
Attribute/Column(s) of Entity/Table "Business Rule Definition"	68
Attribute/Column(s) of Entity/Table "Business Rule Type"	68
Attribute/Column(s) of Entity/Table "Calendar Collection Item"	68
Attribute/Column(s) of Entity/Table "Calendar Container Item"	68
Attribute/Column(s) of Entity/Table "Calendar Content Data"	69
Attribute/Column(s) of Entity/Table "Calendar Event Stamp"	69
Attribute/Column(s) of Entity/Table "Calendar Field"	69

Attribute/Column(s) of Entity/Table "Calendar Field Dictionary Value"	70
Attribute/Column(s) of Entity/Table "Calendar Field Multistring Value"	70
Attribute/Column(s) of Entity/Table "Calendar Item"	70
Attribute/Column(s) of Entity/Table "Calendar Schedule"	71
Attribute/Column(s) of Entity/Table "Calendar Stamp"	71
Attribute/Column(s) of Entity/Table "Calendar Subscription"	72
Attribute/Column(s) of Entity/Table "Calendar Ticket"	72
Attribute/Column(s) of Entity/Table "Calendar Ticket Privilege"	73
Attribute/Column(s) of Entity/Table "Calendar Type"	73
Attribute/Column(s) of Entity/Table "Calendar Workspace"	73
Attribute/Column(s) of Entity/Table "Chat Channel"	73
Attribute/Column(s) of Entity/Table "Chat Channel Subscriber"	73
Attribute/Column(s) of Entity/Table "Chat Message"	74
Attribute/Column(s) of Entity/Table "Chat Status"	74
Attribute/Column(s) of Entity/Table "Chat User Status"	74
Attribute/Column(s) of Entity/Table "CI Attribute Mapping"	74
Attribute/Column(s) of Entity/Table "CI Identifier"	75
Attribute/Column(s) of Entity/Table "CI Identifier Column"	75
Attribute/Column(s) of Entity/Table "CI Type Rule"	75
Attribute/Column(s) of Entity/Table "CIs"	76
Attribute/Column(s) of Entity/Table "CMDB Container"	76
Attribute/Column(s) of Entity/Table "CMDB Import"	76
Attribute/Column(s) of Entity/Table "CMDB Import Type"	76
Attribute/Column(s) of Entity/Table "CMDB Relationships"	76
Attribute/Column(s) of Entity/Table "CMDB Role"	77
Attribute/Column(s) of Entity/Table "CMDB Ruleset"	77
Attribute/Column(s) of Entity/Table "CMDB Ruleset Data Source"	77
Attribute/Column(s) of Entity/Table "Collection"	77
Attribute/Column(s) of Entity/Table "Configuration Allowed Value"	77
Attribute/Column(s) of Entity/Table "Configuration Allowed Value List S"	78
Attribute/Column(s) of Entity/Table "Configuration Allowed Value S"	78
Attribute/Column(s) of Entity/Table "Configuration Area Type"	79
Attribute/Column(s) of Entity/Table "Configuration Axis S"	79
Attribute/Column(s) of Entity/Table "Configuration Category"	79
Attribute/Column(s) of Entity/Table "Configuration Category Type"	79
Attribute/Column(s) of Entity/Table "Configuration File Repository"	80
Attribute/Column(s) of Entity/Table "Configuration Item"	80
Attribute/Column(s) of Entity/Table "Configuration List Type"	80
Attribute/Column(s) of Entity/Table "Configuration Object"	80
Attribute/Column(s) of Entity/Table "Configuration Setting"	81
Attribute/Column(s) of Entity/Table "Configuration Setting Element"	81
Attribute/Column(s) of Entity/Table "Configuration Setting Owner Type"	82
Attribute/Column(s) of Entity/Table "Configuration Setting Status"	82
Attribute/Column(s) of Entity/Table "Configuration Setting Value"	82
Attribute/Column(s) of Entity/Table "Configuration Value List"	83
Attribute/Column(s) of Entity/Table "Configuration Value List S"	83
Attribute/Column(s) of Entity/Table "Configuration Value List Type"	83
Attribute/Column(s) of Entity/Table "Console"	83
Attribute/Column(s) of Entity/Table "Contact Item"	84
Attribute/Column(s) of Entity/Table "Container"	84
Attribute/Column(s) of Entity/Table "Container Definition"	84
Attribute/Column(s) of Entity/Table "Container Group Definition"	84
Attribute/Column(s) of Entity/Table "Container Group Member Definition"	84
Attribute/Column(s) of Entity/Table "Container Group Relationship"	85
Attribute/Column(s) of Entity/Table "Container Home Page"	85
Attribute/Column(s) of Entity/Table "Container Snapshot"	85
Attribute/Column(s) of Entity/Table "Container Type"	85
Attribute/Column(s) of Entity/Table "Create Edit CMDB Role"	85
Attribute/Column(s) of Entity/Table "CSV File Column"	86
Attribute/Column(s) of Entity/Table "CSV File Column Data Type"	86
Attribute/Column(s) of Entity/Table "Custom CMDB Role"	86
Attribute/Column(s) of Entity/Table "Customer"	86
Attribute/Column(s) of Entity/Table "Customer Authentication Type"	86
Attribute/Column(s) of Entity/Table "Customer Login Type"	87
Attribute/Column(s) of Entity/Table "Customer Profile"	87
Attribute/Column(s) of Entity/Table "Customer Read Knowledge Base and Requests Role"	87
Attribute/Column(s) of Entity/Table "Customer Read Knowledge Base Role"	87
Attribute/Column(s) of Entity/Table "Customer Read/Submit Role"	87
Attribute/Column(s) of Entity/Table "Customer Read/Submit/Edit Role"	87
Attribute/Column(s) of Entity/Table "Customer Role"	87
Attribute/Column(s) of Entity/Table "Customer Type"	88
Attribute/Column(s) of Entity/Table "Data Keyword"	88
Attribute/Column(s) of Entity/Table "Data Keyword List"	88
Attribute/Column(s) of Entity/Table "Data Load Type"	88

Attribute/Column(s) of Entity/Table "Data Mart Load History"	88
Attribute/Column(s) of Entity/Table "Data Mart Load Lock"	89
Attribute/Column(s) of Entity/Table "Data Mart Request History"	89
Attribute/Column(s) of Entity/Table "Data Mart Request Queue"	89
Attribute/Column(s) of Entity/Table "Data Mart Request State"	90
Attribute/Column(s) of Entity/Table "Data Mart Request Type"	90
Attribute/Column(s) of Entity/Table "Data Source Type"	90
Attribute/Column(s) of Entity/Table "Data Type"	91
Attribute/Column(s) of Entity/Table "Database Data Type"	91
Attribute/Column(s) of Entity/Table "Database Object Definition"	91
Attribute/Column(s) of Entity/Table "Default Binval"	91
Attribute/Column(s) of Entity/Table "Default Bundle"	91
Attribute/Column(s) of Entity/Table "Default Configuration Setting Value"	92
Attribute/Column(s) of Entity/Table "Default Names"	92
Attribute/Column(s) of Entity/Table "Default Refs"	92
Attribute/Column(s) of Entity/Table "Default Rule"	93
Attribute/Column(s) of Entity/Table "Definition"	93
Attribute/Column(s) of Entity/Table "Definition Lock"	93
Attribute/Column(s) of Entity/Table "Definition Relationship"	93
Attribute/Column(s) of Entity/Table "Definition Relationship Type"	94
Attribute/Column(s) of Entity/Table "Definition Subtype"	94
Attribute/Column(s) of Entity/Table "Definition Type"	94
Attribute/Column(s) of Entity/Table "Definition Version"	94
Attribute/Column(s) of Entity/Table "Definition Version Association"	95
Attribute/Column(s) of Entity/Table "Definition Version Status"	95
Attribute/Column(s) of Entity/Table "Delete Entry"	95
Attribute/Column(s) of Entity/Table "Deleted Column"	95
Attribute/Column(s) of Entity/Table "Deleted Table"	96
Attribute/Column(s) of Entity/Table "Deployment Update"	96
Attribute/Column(s) of Entity/Table "Details Page Link"	96
Attribute/Column(s) of Entity/Table "Device Types"	96
Attribute/Column(s) of Entity/Table "Device Types to CMDB Ruleset"	97
Attribute/Column(s) of Entity/Table "Draft Email Keywords"	97
Attribute/Column(s) of Entity/Table "Dynamic Column Constraint Specification"	97
Attribute/Column(s) of Entity/Table "Dynamic Column Specification"	97
Attribute/Column(s) of Entity/Table "Dynamic LDAP Address Book"	98
Attribute/Column(s) of Entity/Table "Dynamic List Option"	98
Attribute/Column(s) of Entity/Table "Dynamic SQL Address Book"	98
Attribute/Column(s) of Entity/Table "Dynamic Table Index"	98
Attribute/Column(s) of Entity/Table "Dynamic Table Index Column"	99
Attribute/Column(s) of Entity/Table "Dynamic Table Script"	99
Attribute/Column(s) of Entity/Table "Dynamic Table Script History"	99
Attribute/Column(s) of Entity/Table "Dynamic Table Script Type"	100
Attribute/Column(s) of Entity/Table "Dynamic Table Specification"	100
Attribute/Column(s) of Entity/Table "Email Filter"	100
Attribute/Column(s) of Entity/Table "Email Filter Specification Type"	101
Attribute/Column(s) of Entity/Table "Email Incoming History"	101
Attribute/Column(s) of Entity/Table "Email Keyword"	101
Attribute/Column(s) of Entity/Table "Email Notification"	101
Attribute/Column(s) of Entity/Table "Email Notification Attachment"	102
Attribute/Column(s) of Entity/Table "Email Notification Type"	103
Attribute/Column(s) of Entity/Table "Email Protocol Type"	103
Attribute/Column(s) of Entity/Table "Email Template"	103
Attribute/Column(s) of Entity/Table "Email Text"	103
Attribute/Column(s) of Entity/Table "Email Workspace Connection"	104
Attribute/Column(s) of Entity/Table "Event Workflow Process Definition"	104
Attribute/Column(s) of Entity/Table "External Data Source Definition Database Object Definition"	104
Attribute/Column(s) of Entity/Table "External Feed Last Run"	104
Attribute/Column(s) of Entity/Table "External Item"	104
Attribute/Column(s) of Entity/Table "External Item Member"	104
Attribute/Column(s) of Entity/Table "External System Certificate"	105
Attribute/Column(s) of Entity/Table "Field Data Visibility"	105
Attribute/Column(s) of Entity/Table "Field Datatype"	105
Attribute/Column(s) of Entity/Table "Field Definition"	105
Attribute/Column(s) of Entity/Table "Field Dependency Rule"	105
Attribute/Column(s) of Entity/Table "Field Information"	105
Attribute/Column(s) of Entity/Table "Field Status Matrix"	106
Attribute/Column(s) of Entity/Table "Field Type"	106
Attribute/Column(s) of Entity/Table "Fields"	106
Attribute/Column(s) of Entity/Table "File Information"	106
Attribute/Column(s) of Entity/Table "FootPrints Database"	107
Attribute/Column(s) of Entity/Table "FootPrints Internal"	107
Attribute/Column(s) of Entity/Table "Global Container"	107
Attribute/Column(s) of Entity/Table "Header Text Variable List"	107

Attribute/Column(s) of Entity/Table "Horizontal Alignment"	107
Attribute/Column(s) of Entity/Table "Id Generator"	108
Attribute/Column(s) of Entity/Table "Import"	108
Attribute/Column(s) of Entity/Table "Import Assignment"	109
Attribute/Column(s) of Entity/Table "Import Data Encoding Type"	109
Attribute/Column(s) of Entity/Table "Import Definition Rule"	109
Attribute/Column(s) of Entity/Table "Import Error Result"	110
Attribute/Column(s) of Entity/Table "Import Execution Record"	110
Attribute/Column(s) of Entity/Table "Import Scheduled Task"	110
Attribute/Column(s) of Entity/Table "Import Type"	111
Attribute/Column(s) of Entity/Table "Import User Workspace Role"	111
Attribute/Column(s) of Entity/Table "Incident"	111
Attribute/Column(s) of Entity/Table "Incoming Email"	111
Attribute/Column(s) of Entity/Table "Incoming Email Configuration"	112
Attribute/Column(s) of Entity/Table "Incoming Email Filter"	112
Attribute/Column(s) of Entity/Table "Index Type"	112
Attribute/Column(s) of Entity/Table "Internal Identifier Type"	112
Attribute/Column(s) of Entity/Table "Item"	113
Attribute/Column(s) of Entity/Table "Item Attachment"	113
Attribute/Column(s) of Entity/Table "Item Definition"	113
Attribute/Column(s) of Entity/Table "Item Field"	113
Attribute/Column(s) of Entity/Table "Item Field Collection"	114
Attribute/Column(s) of Entity/Table "Item Field Definition"	114
Attribute/Column(s) of Entity/Table "Item Field Journal"	114
Attribute/Column(s) of Entity/Table "Item Lock"	114
Attribute/Column(s) of Entity/Table "Item Relationship"	115
Attribute/Column(s) of Entity/Table "Item Relationship"	115
Attribute/Column(s) of Entity/Table "Item Relationship Definition"	116
Attribute/Column(s) of Entity/Table "Item Table 1"	116
Attribute/Column(s) of Entity/Table "Item Table 2"	116
Attribute/Column(s) of Entity/Table "Item Table 3"	116
Attribute/Column(s) of Entity/Table "Item Useful Detail"	116
Attribute/Column(s) of Entity/Table "Item Useful Summary"	117
Attribute/Column(s) of Entity/Table "Item Vote"	117
Attribute/Column(s) of Entity/Table "Job Configuration Detail"	117
Attribute/Column(s) of Entity/Table "Job Scheduler Configuration"	118
Attribute/Column(s) of Entity/Table "Knowledge Base Container"	119
Attribute/Column(s) of Entity/Table "Last Run"	119
Attribute/Column(s) of Entity/Table "LDAP"	119
Attribute/Column(s) of Entity/Table "License Type"	119
Attribute/Column(s) of Entity/Table "Life Cycle Event"	119
Attribute/Column(s) of Entity/Table "Link Type Definition Version"	120
Attribute/Column(s) of Entity/Table "Load Events"	121
Attribute/Column(s) of Entity/Table "Locale"	121
Attribute/Column(s) of Entity/Table "Localized Column"	121
Attribute/Column(s) of Entity/Table "Localized Column Value"	122
Attribute/Column(s) of Entity/Table "Logical Data Type"	122
Attribute/Column(s) of Entity/Table "Master Contact Item"	122
Attribute/Column(s) of Entity/Table "Microsoft CRM Address Book"	122
Attribute/Column(s) of Entity/Table "NAMP Authentication"	122
Attribute/Column(s) of Entity/Table "Notification Attribute"	123
Attribute/Column(s) of Entity/Table "Notification Recipient Status"	123
Attribute/Column(s) of Entity/Table "Notification Template"	123
Attribute/Column(s) of Entity/Table "Notification Template Attribute"	124
Attribute/Column(s) of Entity/Table "Notification Template Type"	124
Attribute/Column(s) of Entity/Table "Option Set"	124
Attribute/Column(s) of Entity/Table "Outgoing Notification Type"	124
Attribute/Column(s) of Entity/Table "Part Of Speech"	125
Attribute/Column(s) of Entity/Table "Password Reset Question"	125
Attribute/Column(s) of Entity/Table "Password Reset Question Answer"	125
Attribute/Column(s) of Entity/Table "Password Reset Registered Account"	125
Attribute/Column(s) of Entity/Table "Pending Advanced Action"	126
Attribute/Column(s) of Entity/Table "PIM Appointment Information"	126
Attribute/Column(s) of Entity/Table "PIM Record Information"	126
Attribute/Column(s) of Entity/Table "Portal"	127
Attribute/Column(s) of Entity/Table "Portal Console"	127
Attribute/Column(s) of Entity/Table "Preference Group"	127
Attribute/Column(s) of Entity/Table "Previous Timing"	128
Attribute/Column(s) of Entity/Table "Primary Authentication"	130
Attribute/Column(s) of Entity/Table "Product Release"	130
Attribute/Column(s) of Entity/Table "Publish Error"	130
Attribute/Column(s) of Entity/Table "Publish Log"	131
Attribute/Column(s) of Entity/Table "Read Only CMDB Role"	131
Attribute/Column(s) of Entity/Table "Recur Period Type"	131

Attribute/Column(s) of Entity/Table "Recur Schedule Type"	132
Attribute/Column(s) of Entity/Table "Recurring Schedule"	132
Attribute/Column(s) of Entity/Table "Recurring Schedule Days Of Week"	132
Attribute/Column(s) of Entity/Table "Recurring Schedule Period Type"	132
Attribute/Column(s) of Entity/Table "Relationship Definition"	132
Attribute/Column(s) of Entity/Table "Relationship Definition Member"	133
Attribute/Column(s) of Entity/Table "Report"	133
Attribute/Column(s) of Entity/Table "Report Configuration"	134
Attribute/Column(s) of Entity/Table "Report Format"	134
Attribute/Column(s) of Entity/Table "Report Scheduled Task"	134
Attribute/Column(s) of Entity/Table "Report Visibility Type"	135
Attribute/Column(s) of Entity/Table "Request For Change Item"	135
Attribute/Column(s) of Entity/Table "Role Container"	135
Attribute/Column(s) of Entity/Table "Role Group"	135
Attribute/Column(s) of Entity/Table "Role Group Role"	135
Attribute/Column(s) of Entity/Table "Role Type"	136
Attribute/Column(s) of Entity/Table "Rule Usage Statistic"	136
Attribute/Column(s) of Entity/Table "Salenet Address Book"	136
Attribute/Column(s) of Entity/Table "Salesforce.com Address Book"	136
Attribute/Column(s) of Entity/Table "Saved Search Result"	136
Attribute/Column(s) of Entity/Table "Schedule"	137
Attribute/Column(s) of Entity/Table "Schedule"	137
Attribute/Column(s) of Entity/Table "Schedule Actual Period"	137
Attribute/Column(s) of Entity/Table "Schedule Task Run Statistic"	138
Attribute/Column(s) of Entity/Table "Scheduled Task"	139
Attribute/Column(s) of Entity/Table "Scheduled Task Notification"	139
Attribute/Column(s) of Entity/Table "Scheduled Task Run"	140
Attribute/Column(s) of Entity/Table "Scheduled Task Statistic"	140
Attribute/Column(s) of Entity/Table "Scheduled Task Status"	141
Attribute/Column(s) of Entity/Table "Scheduled Task Type"	141
Attribute/Column(s) of Entity/Table "Search Column"	141
Attribute/Column(s) of Entity/Table "Search Condition"	141
Attribute/Column(s) of Entity/Table "Search Constraint Type"	142
Attribute/Column(s) of Entity/Table "Search Item Query"	142
Attribute/Column(s) of Entity/Table "Search Query"	143
Attribute/Column(s) of Entity/Table "Search View"	143
Attribute/Column(s) of Entity/Table "Secondary Authentication"	144
Attribute/Column(s) of Entity/Table "Security Binval"	144
Attribute/Column(s) of Entity/Table "Security Bundle"	144
Attribute/Column(s) of Entity/Table "Security Names"	144
Attribute/Column(s) of Entity/Table "Security Policy"	145
Attribute/Column(s) of Entity/Table "Security Refs"	145
Attribute/Column(s) of Entity/Table "Security Right"	145
Attribute/Column(s) of Entity/Table "Service Item"	145
Attribute/Column(s) of Entity/Table "Service Level Target Item"	145
Attribute/Column(s) of Entity/Table "Service Portfolio Container"	145
Attribute/Column(s) of Entity/Table "Shared Customer"	146
Attribute/Column(s) of Entity/Table "Shared Customer Profile"	146
Attribute/Column(s) of Entity/Table "Snapshot Configuration Setting Value"	146
Attribute/Column(s) of Entity/Table "Snapshot Definition"	147
Attribute/Column(s) of Entity/Table "Snapshot Definition Relationship"	147
Attribute/Column(s) of Entity/Table "Snapshot Definition Version"	147
Attribute/Column(s) of Entity/Table "Snapshot Definition Version Assoc"	148
Attribute/Column(s) of Entity/Table "Snapshot Status"	148
Attribute/Column(s) of Entity/Table "Snapshot Type"	148
Attribute/Column(s) of Entity/Table "Solution Item"	149
Attribute/Column(s) of Entity/Table "SQL Database"	149
Attribute/Column(s) of Entity/Table "Standard Agent Profile"	149
Attribute/Column(s) of Entity/Table "Status"	149
Attribute/Column(s) of Entity/Table "Status Alias"	149
Attribute/Column(s) of Entity/Table "Status List"	150
Attribute/Column(s) of Entity/Table "Status List Status"	150
Attribute/Column(s) of Entity/Table "String Resource Value"	150
Attribute/Column(s) of Entity/Table "String Usage Type"	151
Attribute/Column(s) of Entity/Table "Substitution Variable"	151
Attribute/Column(s) of Entity/Table "Substitution Variable Type"	151
Attribute/Column(s) of Entity/Table "Survey Item"	151
Attribute/Column(s) of Entity/Table "Survey Sent"	152
Attribute/Column(s) of Entity/Table "Syncing Job Detail"	152
Attribute/Column(s) of Entity/Table "System Administration Profile"	152
Attribute/Column(s) of Entity/Table "System Administrator Role"	152
Attribute/Column(s) of Entity/Table "System Component"	152
Attribute/Column(s) of Entity/Table "System Environment"	153
Attribute/Column(s) of Entity/Table "System Log"	153

Attribute/Column(s) of Entity/Table "System Session"	153
Attribute/Column(s) of Entity/Table "Table Column"	153
Attribute/Column(s) of Entity/Table "Target DBMS"	154
Attribute/Column(s) of Entity/Table "Target Match"	154
Attribute/Column(s) of Entity/Table "Target Match Type"	154
Attribute/Column(s) of Entity/Table "tDefn"	154
Attribute/Column(s) of Entity/Table "tDefnRelationship"	155
Attribute/Column(s) of Entity/Table "tDefnSubtype"	155
Attribute/Column(s) of Entity/Table "tDefnTempl"	155
Attribute/Column(s) of Entity/Table "tDefnType"	156
Attribute/Column(s) of Entity/Table "Team"	156
Attribute/Column(s) of Entity/Table "Team Email Notification Type"	156
Attribute/Column(s) of Entity/Table "Team Item Association"	156
Attribute/Column(s) of Entity/Table "Template"	157
Attribute/Column(s) of Entity/Table "Template Application Role"	157
Attribute/Column(s) of Entity/Table "Template Attribute Definition"	157
Attribute/Column(s) of Entity/Table "Template Category"	157
Attribute/Column(s) of Entity/Table "Template Content Type"	157
Attribute/Column(s) of Entity/Table "Template Definition"	158
Attribute/Column(s) of Entity/Table "Template Definition Attribute"	158
Attribute/Column(s) of Entity/Table "Template Group"	158
Attribute/Column(s) of Entity/Table "Template Level"	159
Attribute/Column(s) of Entity/Table "Template Package"	159
Attribute/Column(s) of Entity/Table "Template Package Type"	159
Attribute/Column(s) of Entity/Table "Template Text Keywords"	159
Attribute/Column(s) of Entity/Table "Tenant Partition"	159
Attribute/Column(s) of Entity/Table "Tenant Partition Definition"	160
Attribute/Column(s) of Entity/Table "Text File"	160
Attribute/Column(s) of Entity/Table "Ticket Alert"	160
Attribute/Column(s) of Entity/Table "Ticket Item"	160
Attribute/Column(s) of Entity/Table "Time Dimension"	161
Attribute/Column(s) of Entity/Table "Time Tracking"	162
Attribute/Column(s) of Entity/Table "Time Tracking Type"	163
Attribute/Column(s) of Entity/Table "Time Zone Local Hour"	163

Index	

Entity/Table(s) of Model "Renoir Domain Model Detail"				
Entity/Table Physical_Name	Do Not Generate	Entity/Table Name	Comment	Schema
:item_shortname_bal	false	:Item_Shortname Balance	A summary table to make calculation of hourly balances fast. The date range is a range of whole hours that identifies the period during which the ticket is unclosed at the end of the whole hour. The flags can be summed, and they indicated further whether the ticket was activated or resolved at the end of the hour. This table is only used for unclosed balance metrics, and is designed to be joined with the TIME DIMENSION. Summary higher than hour is possible just by joining the higher granularity time dimension with the date range. Interpolation below the hour can be done for the first or last hour of the ranges using the hard date time in the TICKET EVENT SUMMARY table.	:container_schema
:item_shortname_event_sum	false	:item_shortname Event Sum	The fact table for Ticket Event Summary. The date and time of lifecycle events is stored here, along with calculations for the elapsed work hours and clock hours. There are separate calculations that begin at ticket creation and ticket activation. Resolution Time and Closed Time are two different events. The data in this table is maintained by data mart stored procedures. The name of the table is qualified by the container schema and includes the item short name. In addition to the built-in reporting, this table can be used in any dimensional BI tool to produce useful reports.	:container_schema
:item_shortname_status	false	:item_shortname Status	The configuration settings for the item status and item lifecycle flags are maintained in this table for performance and history reasons. They are replicated here at the beginning of the data mart load process. Even a retired status will be in this table in order to support historical entries. :item_shortname will be substituted at publish.	:container_schema
:item_shortname_transn	false	:item_shortname Transition	A dimension table that records the details of a state transition, including the from and to state names, and the number of hops that are taken in the transition. This allows the precalculation of transitive states, so the transition from A to D via the path A>b>c>D would be recorded with a hopCt of 3.	:container_schema
:item_shortname_transn_sum	false	:item_shortname Transition Sum	The fact table for state transitions. It holds all transitions, whether they are transitive or not. Transitions with a hop count of 1 are traditional transitions. There can be multiple cycles between two states for a single ticket. The Is Longest Hop can be used to identify the distinct longest paths. Work Hours and Clock Hours are calculated for all transitions. In addition to the built-in reporting, this table can be used in any dimensional BI tool to produce useful reports.	:container_schema
actvy_defn	true	Activity Definition	The definition of a task that must take place in order to fulfill an operation contract.	
added_col	false	Added Column		
added_table	false	Added Table		
addr_book	true	Address Book Container	A list of contacts that can be used to define customers. An address book can be used to define customers in a single workspace, and it can be shared among other workspaces. The fields of the Address Book can be customized. Data for the address book can be imported or exported.	

addr_book_option	true	Address Book Option	These are specific address book configuration variables. They will be handled by the existing cfg setting data pattern.	
addr_book_permsn_type	true	Address Book Permission Type	This indicates the fields permission type that determines the visibility scope. Currently the application supports two values: public and internal.	
addr_book_type	true	Address Book Type	You may change your address book type to the following type (s): Dynamic LDAP Address Book Link, Dynamic SQL Address Book Link (SQL Server, Oracle, MySQL, DB2, PostgreSQL, Sybase or Access), Salesnet Address Book Link, Salesforce.com Address Book Link. This will be mapped as a list of allowed values in the current cfg setting data pattern.	
addr_field	true	Address Field		
addr_field_type	true	Address Field Type	This would indicate a value out of a set that includes: Character (single line), Supervisor, Character (multiple line), Integer, Real Number, Date, Dropdown, Multi-Select, Checkbox, Web Site, FTP File/Site, E-mail Address, Add Tab/Section.	
addr_field_type_option	true	Address Field Type Option	This contains the options for the different types of fields. These options will be contained within the current cfg setting data pattern.	
admin	true	Administrator CMDB Role	An Administrator CMDB Role.	
admin_type	false	Administrator Type	The administrator type indicates whether the instance is a system role or not. This is important, since certain preferences cannot be changed on the system administrator role. Values include SYSTEM, WORKSPACE, AGENT.	:fp_schema
agent	true	Agent	a user authorized to use the FootPrints agent functions, which enable the agent to provide services to the customer. These include the ability to edit, escalate, and close tickets.	Cust1_FP1
agent_authcn_type	false	Agent Authentication Type	An indicator to distinguish whether this profile is for an agent (including the workspace administrator) or a system administrator.	:fp_schema
agent_prefc	true	Agent Preference		
agent_prof	true	Agent Profile	Agent profiles are different from the customer profiles by the choice of the preference and role that is chosen.	
agent_role	true	Agent Role	A role that identifies a user as an agent, and also provides more specific information about the application behavior for the agent.	
agent_team	false	Agent Team	The list of Agent team members for a given team.	:fp_schema
agent_type	false	Agent Type	The type of agent (i.e. workspace administrator).	
alert_role_type	false	Alert Role Type		
anonymous_cust	true	Anonymous Customer	a generic guest user account for users that do not have a unique identity in the system. Typically, this user has read only access to browse the knowledge base.	
anonymous_cust_prof	true	Anonymous Customer Profile	A type of workspace user profile that is used for the Anonymous Customer feature. Customers have read only access to the Knowledgebase and Solutions via the customer portal. This is required, but can be an empty profile specifying no anonymous access.	
app_ele	false	Application Element	The identity and name of an element in the application. An element can be one of many types, and can contain other elements. Example Application Elements include: a screen, a form, a dialog box, a text box, the Home Page, an Architecture Component.	:fp_schema

app_ele_defn	false	Application Element Definition	Application Element Definition is an association between the Definition entity and the Application Element entity. This association contains a distinct value for each of the intersection points between the two entities.	
app_ele_nmosp	false	Application Element Namespace	A string that best describes the namespace of the Element Name. For example "FootPrints.UserInterface.Item.MaintenanceForm". These are maintained in a picklist so that consistency can be managed. There may be a hierarchy in the name, but the components of the hierarchy will not be enforced or maintained.	
app_ele_string	false	Application Element String	A string resource that is needed in English and other translations. The string is associated with an Application Element and a Usage, for example the Label, the Tooltip, etc.	:fp_schema
app_ele_string_usage	false	Application Element String Usage	The collection of String Usage types that are valid for use with an Application Element type. This is used for Internal systems to validate entry and control the edit interface.	:fp_schema
app_ele_type	false	Application Element Type	The class subtype indicator for Application Element, used in an inheritance pattern. Types include UI Element, Error Code, Localized Column, etc. There may need to be further subtypes, for example of UI Element. The subtypes will share common Finder methods and key construction methods and metadata for identification.	:fp_schema
app_role	false	Application Role	A User Security Role within Footprints. This includes Agent Users and Customer Users, and includes Role settings at the Instance and Container level. Workspace Role and CMDB Role may both be implemented as Container Role. The Role has associated Rights and Permissions, and is a way of granting Roles and Permissions to a User. There is some conceptual overlap between the User Profile and the Role. The User is assigned a single Role as part of the User Profile, and a User can only have one System Role and one Workspace Role. The User Profile can have property settings that override the Role Settings.	:fp_schema
app_user	false	Application User	A user authorized to use the FootPrints system. The user is either a Customer User or an Agent User. The application user holds the minimum information needed to identify the user and associate the user with a user profile, where user settings are stored. A contact is not necessarily an application user. An application user entry is required in order for the user to access any online functions.	:fp_schema
app_user_prof_link	false	Application User Profile Link	The link between the application user and the user profile.	:fp_schema
appt	true	Appointment	A calendar appointment at a specific time for specific parties.	
asset_core	true	Asset Core		
asset_core_col	true	Asset Core Column	The asset core columns are preset sets of columns based on the import type (device, software, software relationship or network relationship).	
asset_item	true	Asset Item		
asgmt	false	Assignment	The current state and historical record of responsibility for a ticket. Regular assignments involve all parties that share responsibility for the ticket and are interested potentially in notifications. Primary Assignments additionally indicate that one and only one user is responsible for the ticket for a span of time. A user will have a span of Primary Assignment that is within the boundaries of his	:container_schema

			regular non-Primary Assignment. It is expected that an individual would have a single large span of time, possibly the life of the ticket, as a regular assignment. The individual may have zero, one, or more periods of PrimaryAssignment, stored as additional records.	
asgmt_type	false	Assignment Type	The assignment type indicates the notification level of the assignment. The current types consist of the following: Regular Assignment, CC Assignment, Primary Assignment .	:fp_schema
association_type	false	Association Type		:fp_schema
attach_files	false	Attach Files		
atth	true	Attachment	A binary or text file attachment that can be related to various entities that accept attachments, such as Issue or Emails.	
atth_inbd_email	false	Attachment Inbound Email		
atth_outbd_email	false	Attachment Outbound Email		
audit_event_type	false	Audit Event Type	A discriminator indicating the type of Audit Log Entry. Values include Audit Log Note, Audit Log Data Change, and Audit Log Data Version.	:fp_schema
audit_field_cfg	false	Audit Field Configuration	Configuration values for the Audit that determine if a dynamic item should be audited. If only Dynamic Items are supported, then auditing may be something that cannot be turned off? Configuration Setting Values are used for the audit indicator. Within the Java code, automatic logging of classes can be turned on.	:fp_schema
audit_log	false	Audit Log	The main Audit Log table which uses a serial key to establish the order of Audit Trail entries as committed to the system. It has subordinate notes and data values which are considered unordered within the Audit Log. It is possible and desirable that multiple Audit Log entries would have the same transaction id.	:fp_schema
audit_msg_tmpl	false	Audit Message Template	A template message that is generated from the application with string substitution parameters. Only string variables are supported, because the eventual usage is just string presentation, and localization of the parameters is not supported.	:fp_schema
audit_prop_chg	false	Audit Property Change	A data change record indicating the Inserted or Updated value. Deleted Values are not recorded here.	:fp_schema
audit_prop_dim	false	Audit Property Dimension	A dimension table that holds every combination of Object Name, Property Name, Insert Update Delete Code, etc. that has been used in the Audit Trail. The purpose of this data design is to compress the repeated information in the Audit Trail, reducing data and speeding up indexed queries.	:fp_schema
audit_rule_name	false	Audit Rule Name	This is a derived table of current and historical Rule Names that is used to make a permanent record of the rule name for the Audit trail. The replication will be done on publish and will avoid locking the definition tables during Audit History storage. The name of the Rule is replicated from the Rule Definition to avoid problems with query complexity, deletion and modification of Rule names, and locking. If a rule is deleted on publish, the delete date will be filled in. This table is cached in memory so the Audit Function does not have to repetitively retrieve it.	

audit_trail	true	Audit Trail	A listing of all changes made to information stored in the FootPrints system. This includes but is not necessarily limited to database column changes. All tables potentially have changes to them recorded here, so those relationships via a generic foreign key are not shown.	
audit_txn	false	Audit Transaction	A record of the Principal and create time of the start of the commit time of a logical transaction. In many cases multiple Audit Log entries will use the same transaction.	:fp_schema
audit_txn	true	Audit Transaction	A change made to information stored in the FootPrints system. This includes but is not necessarily limited to database column changes. All table potentially have changes to them recorded	
audit_txn_audit_trail	false	Audit Transaction Audit Trail		
authcn_method	true	Authentication Method	One of several procedures for verifying the identity of a peer, such as a challenge password or a digital certificate.	
authcn_method_type	true	Authentication Method Type	The type of authentication. FootPrints for Windows supports four modes of user/ password authentication. You have the option of using FootPrints internal encryption techniques, where FootPrints will maintain its own database of users and passwords. Alternatively, FootPrints can let the web server perform the authentication, or FootPrints can authenticate by interfacing with either an LDAP directory server or the Windows user list.	
auto_add_cust_prof	true	Auto Add Customer Profile	A type of user profile that is used for the Auto Add Customer feature. An assignment of roles to workspaces that applies to a customer based on administrator assignment or criteria available from the Customer Authentication method (such as LDAP).	
numara_saas_sys_cust	true	BMC SaaS System Customer	A customer that uses BMC SaaS to supply needed software functionality.	
numara_saas_sys_prvdr	true	BMC SaaS System Provider	A BMC service provider that delivers footprints through the web. The BMC provider delivers service based on set license and delivery models that have purposely been made more flexible than the standard approach of SaaS.	
boolean	true	Boolean	A boolean value represents a logical true or false (yes or no). For example, if a the visitor has been logged in or not. Typically you use booleans as the condition of the if directive, like <code><#if loggedIn >...</#if></code> or <code><#if price == 0>...</#if></code> ; in the last case the result of the price == 0 part is a boolean value. In the templates you can directly specify a boolean with the reserved words true and false.	
broadcast_alert	false	Broadcast Alert	A broadcast alert message.	:fp_schema
broadcast_msg	false	Broadcast Message		
broadcast_msg_type	false	Broadcast Message Type		
built_in_level	true	Built_in_level		:fp_schema
bus_proc	false	Business Process	A business process is a set of containers, items, business rules, etc created from a business process template.	:fp_schema
bus_proc_defn	false	Business Process Definition	The collection of definitions associated with a business process that was created as a result of using a business process template to create a business process.	:fp_schema
bus_rule	false	Business Rule	A new Business Rule is created and associated with Workflow Process State value, Group of States, Workflow Process State Transition or Workflow Process as a whole.,	

bus_rule_association	false	Business Rule Association	<p>Requirements:</p> <p>A Business Rule can be associated with Workflow Process State value, Group of States, Workflow Process State Transition or Workflow Process as a whole.</p> <p>A Business Rule cannot be associated with the Initial or Final State.</p> <p>A Business Rule cannot be associated with any Workflow Process State Transition that points to the Final State.</p> <p>A new Business Rule is created and associated with Workflow Process State value, Group of States, Workflow Process State Transition or Workflow Process as a whole</p> <p>The business rule, type, and workflow id will be unique, and the order of the business rules will be governed by the type and workflow id grouping.</p>	
bus_rule_association_type	false	Business Rule Association Type	<p>This will cover the four types of association outlined in the SRS.</p> <p>From 4.17 of FootPrints SRS - Workflow Design Time Use Cases</p> <p>A new Business Rule is created and associated with Workflow Process State value, Group of States, Workflow Process State Transition or Workflow Process as a whole</p>	
bus_rule_defn	true	Business Rule Definition	<p>A Business rule is a statement that defines or constrains some aspect of the business. It is intended to assert business structure or to control or influence the behavior of the business.</p>	
bus_rule_type	false	Business Rule Type	<p>A combination of the business rule order and the type determine when the business rule is processed.</p> <p>Defined types are: On Exit, On Transition, On Enter, On Exit (Group), On Enter (Group), On Any Transition, Updated In Any Group, Updated In State, Updated In State or Group, On Transition, Updated in Any State.</p>	
cal_coll_item	false	Calendar Collection Item	<p>Holds calendar item collection relationships</p>	:fp_schema
cal_cntrn_item	false	Calendar Container Item	<p>The Container Item that is related to the Calendar Appointment Item. For Workspaces, the Workspace default calendar will have appointments between Issue Assignee agents and the Customer Contact in order to resolve the Issue/Workspace Item. It is called Container Item in case there is a capability to relate the appointment to a CMDB item or Knowledgebase Item.</p>	:fp_schema
cal_content_data	false	Calendar Content Data	<p>Binary Large Objects (BLOBs) linked to an appointment item.</p>	:fp_schema
cal_event_stamp	false	Calendar Event Stamp	<p>A log of calendar service events. A stamp associates a related set of properties/ attributes/methods to an Calendar Item. Event Stamp contains properties and apis relating to an iCal event.</p>	:fp_schema
cal_field	false	Calendar Field	<p>A name/value data field value for a calendar item. Calendar Item has a map of Attribute objects, indexed by a QName . An Attribute can be associated to a single Item . QName is a composite key that represents a qualified name (namespace and local name). There are several Attribute implementations (String, Binary, Integer, etc) that are used to store different types of values. The polymorphic mapping allows any number of and any mix of Attribute implementations to be associated to an item.</p>	:fp_schema

cal_field_dict_val	false	Calendar Field Dictionary Value	Stores dictionary values for a calendar item. May not be used.	:fp_schema
cal_field_multistring_val	false	Calendar Field Multistring Value	Stores multiple string values for a calendar item. May not be used. Has no primary key, its a bag of values.	:fp_schema
cal_item	false	Calendar Item	The main calendar item table for the calendar service. This table is populated and maintained by the Calendar Service API. It is not very suitable for database query outside of the API. The calendar item can be a personal or workspace calendar, or an appointment within the calendar. The calendar item can be synched using the iCal format.	:fp_schema
cal_prefc	true	Calendar Preference		
cal_schd	false	Calendar Schedule	The association between the FootPrints calendar instance, and the implementation of the calendar schedule and appointments. This enables the reuse of a schedule between workspaces, but it does not require it.	:fp_schema
cal_stamp	false	Calendar Stamp	Calendar Item has a set of Calendar Stamp objects. A Calendar stamp can be associated to a single Calendar Item. A stamp associates a related set of properties/attributes/methods to an Calendar Item. This is different from Calendar Attribute, which generally represents a single value. For example Event Stamp, contains properties and apis relating to an event and MessageStamp contains properties related to an email message. The stamp model allows items to be stamped and unstamped with these related sets of properties throughout its life-cycle.	:fp_schema
cal_subscription	false	Calendar Subscription	A Calendar Subscription contains a ticket key and a collection uid. It is a way to associate a collection that is not owned by the user to the user. The ticket key provides the necessary authentication to access the collection. Not used.	:fp_schema
cal_ticket	false	Calendar Ticket	This is unrelated and different than an ITSM ticket. See the Calendar Container Item table for ITSM tickets. A calendar ticket is an authorization object that grants some level of access to a calendar item and its descendants based on a unique ticket key. If a client has this key, then the client can gain access to the item and its descendants with the ticket key. May not be used in the FootPrints integration of calendaring code, because the calendar permissions are subordinate to the application security model.	:fp_schema
cal_ticket_privilege	false	Calendar Ticket Privilege	(Not used, but referenced in Java code that must be removed before table deletion.) A permission granted via a calendar ticket. May not be used in the FootPrints integration of calendaring code.	:fp_schema
cal_type	false	Calendar Type	The type of Calendar, Workspace or Personal	:fp_schema
cal_wksp	false	Calendar Workspace	The usage of a Calendar in a Workspace. The calendar can be used as the Workspace default calendar, or it can be used in SLA calculations.	:fp_schema
chat_channel	false	Chat Channel	A chat channel.	:fp_schema
chat_channel_subscriber	false	Chat Channel Subscriber	A subscriber to a chat channel.	:fp_schema
chat_msg	false	Chat Message	A message broadcast on a chat channel.	:fp_schema
chat_status	false	Chat Status	A lookup table for chat status. Values include: AVAILABLE AWAY INVISIBLE_TO_CUSTOMERS INVISIBLE BUSY OFFLINE	:fp_schema

chat_user_status	false	Chat User Status	The current chat status of an agent or customer application user.	:fp_schema
child_item	false	Child Item		
ci_attr_mapping	false	CI Attribute Mapping	This shows the relationship between a particular CI, an attribute, and an available column.	
ci_id	false	CI Identifier	This represents the list of column/attribute combinations for both the from and to CI identifier fields.	
ci_id_col	false	CI Identifier Column	These are the available columns for selection. The columns are preset for the asset core import type, but they come in from the csv text file, and are read from the sql table.	
ci_type_rule	false	CI Type Rule	CI type rules set teh CI type if a certain criteria is met in one of the text columns. Note this is only for the text columns and is a basic substring search.	
cis	false	CIs	A Configuration Item (CI) is any item of information technology (IT), including data or documents, that is or will be under the control of Configuration Manager and therefore. Agents can link CIs to Issues (Incidents, Problems, Changes, etc.) and make use of the Configuration Management Database (CMDB), including the visualization tool, to determine which CIs are affected by an incident, problem, or change. Agents can view the Details pages of CIs that have been linked to Issues depending on the level of permission(Role) given to them by the CMDB Administrator. Customers can view the list of linked CIs when viewing the Edit Issues page, but cannot access the Details page or any other Configuration Manager information. If the CMDB Status Id is null, then the status is specified in a column of the imported data.	
cmdb_cntr	true	CMDB Container	A Configuration Management Database (CMDB) class of container. The CMDB container implements ITIL CMDB special features beyond the capabilities of the generic Container. The CMDB acts as a repository of Configuration Items and supports population, synchronization, and refererencing of items within it.	
cmdb_imp	false	CMDB Import		
cmdb_imp_type	false	CMDB Import Type	Currently the types include CIs or relationships.	
cmdb_prefc	true	CMDB Preference		
cmdb_relns	false	CMDB Relationships	The Relationships tab provides a powerful means to refine searches, allowing you to perform searches as simple as finding "all of the CIs connected to an email server" or as complicated as "all of the CI connected to an email server with 2 Gb of RAM that were created between March 2, 2009 and March 2, 2012 but not made by Vendor X or were made by Vendor X but have Pentium III processors". The Filter on Relationships tab only refines searches on the CI Types you selected on the Choose CI Types page, filtering them based on the relationship criteria that you select. If CMDB Relationship Id is null, then the relationship is specified in an imported column.	

cmdb_role	true	CMDB Role	A role in the CMDB container	
cmdb_ruleset	false	CMDB Ruleset		
cmdb_ruleset_data_source	true	CMDB Ruleset Data Source	This is the data source for the ruleset. Its available types include: Asset Core, CSV File, and SQL Database.	
coll	true	Collection	A collection, from the viewpoint of the template author, is a restricted sequence. You cannot access its size or retrieve its subvariables by index, but they can be still listed with the list directive.	
cond	false	Condition		
cfg_allow_val	false	Configuration Allowed Value	A Configuration Allowed Value represents a member of a list of possible values.	:fp_schema
cfg_allow_val_list_s	false	Configuration Allowed Value List S		
cfg_allow_val_s	false	Configuration Allowed Value S		
cfg_area_type	false	Configuration Area Type	The lookup table for the high level area of Configuration. Values include APPLICATION, BUSINESS, CORE, DEPLOYMENT, INFRASTRUCTURE, TOOL	:fp_schema
cfg_axis_s	false	Configuration Axis S		
cfg_ctgy	false	Configuration Category	A Category of Configuration, which corresponds to the namespace and name of an object that defines and contains the associated Configuration Settings. The intent is that the Category provides both a logical and physical grouping of configuration data so that developers working on different components do not have to compete with each other to check out the same files to define configuration, and do not have to merge changes.	:fp_schema
cfg_ctgy_type	false	Configuration Category Type	The category of configuration lookup table. The category is like a namespace, it identifies where a setting is defined, and can be used to retrieve groups of settings via the API. The categories are defined in the Java code, but they are replicated to the Database for data integrity of the settings. They also serve to identify all possible categories, whether or not configuration settings are stored for them. Examples of the 70+ values include APPLICATION_HELP, BUSINESS_ADMIN_PIM_SYNCING, BUSINESS_ANALYTICS.	:fp_schema
cfg_file_repository	false	Configuration File Repository	Now during publishing, new dynamic HBM files will be stored in DB and fetched during session restart. Configuration files are also stored here. Design Notes: Identify all configuration files that application (Renoir) need for startup, and running. - Very important that we identify all the files that application is using today. This will help us with #5. a. Examples; Hibernate Configuration Files, and . Properties files. This does not include Spring Specific files. /application/src/main/resources/footprints-email-incoming.properties /business/src/main/resources/ical4j.properties /business/src/main/resources/assetcore-searchdevice-one-result-response.xml /business/src/main/resources/cosmo.version.txt /business/src/main/resources/jeclicense /business/src/main/resources/privkeystore /business/src/main/resources/timezone.alias /core/src/main/resources/mappings/*.* /core/src/main/resources/footprints-external-data.properties /core/src/main/conf/mysql/*.* /core/src/main/conf/oracle/*.* /core/src/main/conf/	:fp_schema

			<p>postgres/*.* /core/src/main/conf/ sqlserver/*.* /infrastructure/src/main/ resources/dbschema/*.* /infrastructure/src/main/conf/*. properties /web/src/main/conf/footprints- application-key.properties /build/src/main/deployment/ log4j.properties</p> <p>2. Where to store the configuration files (file data store) - This is</p> <p>a. Database of File Storage We plan doing this as more general file Repository interface that will allow us to select any specific implementation. But in our case we decided to use DB.</p> <p>3. How to retrieve the files from file data store - Store them in blob format of DB and on demand transform into ByteArrayInputStream.</p>	
cfg_item	true	Configuration Item	<p>A specialization of Item contained in a CMDB container. A Configuration Item (CI) in the Configuration Management Data Base (CMDB). A Configuration Item is a repository item representing a software, hardware, or service item. There are important relationships to other items both within the CMDB but also externally to the CMDB. The CI has the ability to store fields as defined based on its CI Type. Current Footprints creates a table for the CI type named with the CMDB sequence identifier and the CI Type sequence identifier.</p>	
cfg_list_type	false	Configuration List Type	<p>The type of list according to the number of key values needed to identify a value, and the source of values.</p>	:fp_schema
cfg_obj	false	Configuration Object	<p>A configuration object holds configuration settings but is not versioned and published like a definition and definition version.</p>	:fp_schema
cfg_setting	false	Configuration Setting	<p>A configuration variable that can be identified in programming code and which has an atomic value that affects the behavior of the application. Configuration values are either scalars, or are supported by value lists that also can be programmatically identified. They have localized labels and value choices, and are categorized to support organization and separation in programming namespaces and configuration screens. They support the concept of Built-In Values, Default Values, and Customized Values.</p>	:fp_schema
cfg_setting_ele	true	Configuration Setting Element	<p>A configuration setting can have a label or other strings associated with it.</p>	
cfg_setting_owner_type	false	Configuration Setting Owner Type	<p>A lookup table for Owner Types of Configuration Setting Values. Values include: APPLICATION_USER, DEFINITION_IMPORTS, ROLE, SIMPLE_CONFIGURABLE_OBJECT, USER_PROFILE.</p>	:fp_schema
cfg_setting_status	false	Configuration Setting Status		
cfg_setting_val	false	Configuration Setting Value	<p>Configuration Setting Value is an association between the Configuration Setting entity and a container entity (i.e. User Profile, Role, and Definition). This association contains a distinct value for each of the intersection points between the two entities.</p>	:fp_schema
cfg_val_list	false	Configuration Value List	<p>The Configuration Value List is a class that represents a set of values. It is meant to be inherited by a sub category with the structure of the set of values more concretely defined in the lower entity.</p> <p>Example: Configuration Dynamic List The Configuration Dynamic List inherits from the Configuration Value List but maps the values into a linear list so that the values can be identified by their position in</p>	:fp_schema

			the overall list of values.	
cfg_val_list_s	false	Configuration Value List S		
cfg_val_list_type	false	Configuration Value List Type		
console	false	Console	A console in the FootPrints 12 User Interface. A console can contain other consoles, for example the Home Page.	:fp_schema
addr_book_entry	true	Contact Item	A contact that belongs to the FootPrints address book. This could be implemented as a specialization of Item which has the needed features of flexible schema, and data mapping adapters.	
cntr	true	Container	The highest abstract level of Runtime Object. The Runtime object has a cooresponding definition that acts as a catalog of the Runtime Entity. There is a hierarchy or composition concept in the Runtime Entity, but it may not be necessary to actually have navigable properties.	
cntr_defn	true	Container Definition	The definition of a Container and the associated Configuration_Settings at the container level. This would include the collection of Item Definitions. The Container_Definition will have a Container Class identifier (Workspace, CMDB, Address Book) and may have specializations such as Workspace_Container_Definition. As much as possible, the Container Definition will suffice to describe any Container Type. There will be an association to a default Container Template, as well as more application specific Container Templates that can be chosen to initially populate the Container Template. There will also be Container Group Definition, and Container Group Templates.	
cntr_grp_defn	true	Container Group Definition	The definition of a Group Container and the associated Configuration_Settings at the container level. This would include the reason for the grouping and the types of containers in the group.	
cntr_grp_mbr_defn	false	Container Group Member Definition	The definition of a Container and the associated Configuration_Settings at the container level including the parent container information. This would include the collection of Item Definitions. The Container_Definition will have a Container Class identifier (Workspace, CMDB, Address Book) and may have specializations such as Workspace_Container_Definition. As much as possible, the Container Definition will suffice to describe any Container Type. There will be an association to a default Container Template, as well as more application specific Container Templates that can be chosen to initially populate the Container Template.	
cntr_grp_reln	true	Container Group Relationship	The container group may exist in the runtime environment. It may suffice to have the Definition of the container group.	
cntr_home_page	true	Container Home Page	The homepage is the URL or local file that automatically loads when a web browser starts or when the browser's "home" button is pressed.	
cntr_snapshot	false	Container Snapshot		:fp_schema
cntr_type	false	Container Type		
create_edit	true	Create Edit CMDB Role	A Create Edit CMDB Role	
csv_file_col	true	CSV File Column		
csv_file_col_data_type	true	CSV File Column Data Type	Types include; text, integer, float (decimal), datetime.	
custom	true	Custom CMDB Role	A custom CMDB role.	
cust	true	Customer	a user authorized to use the FootPrints customer functions. This includes the ability to enter requests, and interact with requests as they are worked by Agents.	Cust1_FP1

cust_authcn_type	false	Customer Authentication Type	An indicator to distinguish whether this profile is for a unique customer profile (including the specific customer profile) or if it requires a special authentication technique (i.e. Anonymous Customer Profile has read only access to the knowledge base without having to be authenticated).	:fp_schema
cust_login_type	false	Customer Login Type	A lookup table for the customer login type. It identifies the method of authenticating customer users.	:fp_schema
cust_prefc	true	Customer Preference		
cust_prof	true	Customer Profile	Customer profiles are different from the agent profiles by the choice of the preference and role that is chosen.	
cust_read_knowledge_base_and_r	true	Customer Read Knowledge Base and Requests Role	A built in role that identifies a user as a customer, and also provides more specific information about the application behavior for the customer. Generally it specifically grants authorization for certain functions.	
cust_read_knowledge_base_role	true	Customer Read Knowledge Base Role	A built in role that identifies a user as a customer, and also provides more specific information about the application behavior for the customer. Generally it specifically grants authorization for certain functions.	
cust_read_submit_role	true	Customer Read/Submit Role	A built in role that identifies a user as a customer, and also provides more specific information about the application behavior for the customer. Generally it specifically grants authorization for certain functions.	
cust_read_submit_edit_role	true	Customer Read/Submit/Edit Role	A built in role that identifies a user as a customer, and also provides more specific information about the application behavior for the customer. Generally it specifically grants authorization for certain functions.	
cust_role	true	Customer Role	A role that identifies a user as a customer, and also provides more specific information about the application behavior for the customer.	
cust_type	false	Customer Type	The type of customer (i.e. shared, anonymous, or unique).	
data_keyword	false	Data Keyword		
data_keyword_list	false	Data Keyword List		
data_load_type	false	Data Load Type	A lookup table for the load type. Values include: FULL_LOAD Full deletion and re-adding of item data in the data mart INCR_LOAD Incremental deletion and re-adding of item data changed in the data mart.	:fp_schema
data_mart_load_history	false	Data Mart Load History	The history of data mart full and incremental loads. A full load is chunked into 10K row batches and is restartable and re-runnable. An incremental load processes all the activity since the previous run, which is assumed to be a short duration. This table holds an Audit Transaction Id reference to the Audit tables, which identify the last transaction processed. This table is designed to handle many types of data marts in multiple different containers. Currently, only two Ticket data marts are defined and run. If a new data mart fact table were defined, and stored procedures written for the full and incremental load, and all entries defined in the request tables, the data mart java process should manage the loading.	:fp_schema

data_mart_load_lock	false	Data Mart Load Lock	A pessimistic lock table designed to prevent multiple loads from running against the same item. It is also used to count and throttle the number of simultaneous loads. Both the full and incremental loads drop and create tables so that faster non-logged database operations can be used (Select * INTO..., CREATE TABLE AS SELECT *...) The tables have item specific names, so they must single thread.	:fp_schema
data_mart_rqst_history	false	Data Mart Request History	A history table detailing the results of Data Mart request execution. It is also used to report the last run of the data mart on data mart reports. It may need to be purged from time to time as each request is logged even if no updates occur, and the frequency defaults to 10 minutes.	:fp_schema
data_mart_rqst_queue	false	Data Mart Request Queue	The queue of active data mart load requests. An entry in this table will be picked up by the Java Data Mart manager and used to initiate and then maintain state of the request. The FootPrints UI controls data mart execution by creating and updating rows in this table. During upgrade, a request to update all data marts is added, and once the system comes up, Data Marts are updated in round robin fashion.	:fp_schema
data_mart_rqst_state	false	Data Mart Request State	A lookup table for the state of data mart request processing. Values include: PENDING, CANCEL_REQUEST, IN_PROCESS, DONE, FAILED, CANCELED.	:fp_schema
data_mart_rqst_type	false	Data Mart Request Type	A lookup table for the data mart load request type. Values include: FULL_LOAD, SCHEDULED_INC_LOAD, REQUESTED_INC_LOAD, FULL_LOAD_WITH_SCHD_UPDATE, REBUILD_ALL_DATAMARTS.	:fp_schema
data_source_type	true	Data Source Type	Data source types include: asset core, text file, or SQL database.	
data_type	false	Data Type		
db_data_type	false	Database Data Type	The physical database types associated with a logical database type, used in DDL generation and also database DML access.	:fp_schema
db_obj	true	Database Object	Database objects are the components that save and query information. A database contains several objects that are used to provide storage and display large, relational data. The main objects of a database are tables, stored procedures, views, users and functions.	
db_obj_defn	true	Database Object Definition	The database definition object that links to configuration settings and properties to determine the functionality of a database item. Database objects are the components that save and query information. A database contains several objects that are used to provide storage and display large, relational data. The main objects of a database are tables, stored procedures, views, users and functions.	
date	true	Date	A date variable stores date/time related data. It has three variations: 1) A date with day precision (often referred simply as "date") as April 4, 2003 2) Time of day (without the date part), as 10:19:18 PM. Time is stored with millisecond precision. 3) Date-time (sometimes called "time stamp") as April 4, 2003 10:19:18 PM. The time part is stored with millisecond precision. Unfortunately, because of the limitations of the Java platform, FreeMarker sometimes can't decide which parts of the date are in use (i.e., if it is date-time, or a time of day, etc.). The solution for this problem is an advanced	

			topic that will be discussed later. It is possible to define date values directly in templates, but this is an advanced topic that will be explained later.	
dflt_binval	false	Default Binval	Apache JackRabbit Content Repository Table. Access via JCR API.	:content_repository
dflt_bundle	false	Default Bundle	Apache JackRabbit Content Repository Table. Access via JCR API.	:content_repository
dflt_cfg_setting_val	false	Default Configuration Setting Value		:fp_schema
dflt_names	false	Default Names	Apache JackRabbit Content Repository Table. Access via JCR API.	:content_repository
dflt_refs	false	Default Refs	Apache JackRabbit Content Repository Table. Access via JCR API.	:content_repository
dflt_rule	true	Default Rule	A default rule is a statement that defines or constrains some aspect of the business. It is intended to assert business structure or to control or influence the behavior of the business.	
defn	false	Definition	A definition is the supertype table that holds the structural and behavioral information needed for an application element that is configurable by the system designer and/or the end user. All of the metadata that is published is here. FootPrints 11 uses a combination of directories, files, tables, and programming code to represent this information. The new FootPrints 12+ provides all of the same information within the definition. The definition can be persisted in a structure that is isolated at the Instance Level. A lot of important information about the definition will be stored as associated Configuration Settings. See the database views v_defn_ver_active, v_cntrn_item_field.	:fp_schema
defn_lock	true	Definition Lock	A pessimistic lock of a definition. The lock helps implement single session editing. It is intended to be used for container definitions, but may be used by other definitions as well. This is not a table it is implemented with configuration settings.	:fp_schema
defn_reln	false	Definition Relationship	All relationships between definitions are stored in this table in order to make the model able to handle new relationships without changes to tables.	:fp_schema
defn_reln_type	false	Definition Relationship Type	The Definition Relationship Type entity depicts a set of relationships that a Definition instance in the system can have with another Definition instance (i.e. parent_child indicates a hierarchical relationship). This specific relationship is further clarified when combined with the Definition Relationship Member Type entity.	:fp_schema
defn_subtype	false	Definition Subtype	The subtype of the definition used as a discriminator for the class of definition. Each subtype will have different configuration settings and associated definitions. These include associated built-in field definitions for item subtypes. See the database view v_defn_subtype.	:fp_schema
defn_type	false	Definition Type	The scope of the Template chosen from Instance, Container Group, Container, Item, Field.	:fp_schema
defn_ver	false	Definition Version	A version of a Definition with a version identifier that changes when data changes are made to the template. The definition version will suffice to store the current state of the FootPrints Configuration. A full copy of the definition tree is versioned when a container is published. See the database views v_defn_ver_active, v_cntrn_item_field.	:fp_schema

defn_ver_association	false	Definition Version Association		:fp_schema
defn_ver_status	false	Definition Version Status	<p>The attribute of the definition version entity that tells what state the definition instance is in. The word "Published" in this context means a change being committed or made ready for runtime. Currently the available status options are:</p> <p>Draft - the entity instance is being created or changed, but has not yet been published, so is not yet valid for runtime.</p> <p>Active - the entity instance has been published, and is available for runtime.</p> <p>Superseded - the entity instance has been previously published, but has been replaced with a newer version of itself in runtime.</p>	:fp_schema
delete_entry	false	Delete Entry		
deleted_col	false	Deleted Column		
deleted_table	false	Deleted Table		
deployment_update	false	Deployment Update	A log of updates to the database structure performed by the installation deployment. This log ensures that the correct scripts are run in order, and prevents the re-running of scripts.	:fp_schema
dtls_page_link	false	Details Page Link		
device_types	false	Device Types	<p>This represents a list of available device types that the user can choose to include in the mapping as a type of filter of the available data.</p> <p>"Devices" are Desktops, Laptops, Servers, Routers, Switches, and Printers. The terms "Device" and "Asset" are used interchangeably in FootPrints Service Core.</p>	
device_types_to_cmdb_ruleset	false	Device Types to CMDB Ruleset	This is the association of the available devices to a particular ruleset. It only has meaning when the data source is asset core and the import type is devices.	
draft_email_keywords	false	Draft Email Keywords		
dyn_col_cstr_spec	false	Dynamic Column Constraint Specification	A database constraint associated with a column.	:fp_schema
dyn_col_spec	false	Dynamic Column Specification	The list of column specifications for the Dynamic Table Specification. A column will be added or modified to align with the column specification.	:fp_schema
dyn_ldap_addr_book	false	Dynamic LDAP Address Book	Address Book entries maintained in the Dynamic LDAP data source. This is the most popular type. Address Book entries maintained in the Dynamic LDAP data source. This is the most popular type.	
dyn_list_option	false	Dynamic List Option		
dyn_sql_addr_book	false	Dynamic SQL Address Book	Address Book entries maintained in a SQL database table not maintained by the FootPrints infrastructure. Supported databases include: SQL Server, Oracle, MySQL, DB2, PostgreSQL, Sybase or Access.	
dyn_table_index	false	Dynamic Table Index	A physical database index associated with a dynamically generated table. Different DBMS can have different number and types of these indexes. An index specification will be generated to the database.	:fp_schema
dyn_table_index_col	false	Dynamic Table Index Column	The collection of index column specifications for an index.	:fp_schema
dyn_table_script	false	Dynamic Table Script	A DDL script with substitution parameters that is executed by Data Access during the publish process. It contains data structures that must be created along with the tables that are generated for the dynamic item. Parameters may include: a) schema name b) item name prefix (derived from the item name, possibly exactly equal to it) c) container id d) item definition Id Generally, the scripts can be	:fp_schema

			run post level (container, Item) creation using the Type Order and then the Script Order. If the script is changed in the directory then it is reloaded and gets a new identifier. This will cause it to re-run. Scripts must be fundamentally re-runnable.	
dyn_table_script_history	false	Dynamic Table Script History	Records the successful execution of the Dynamic Table Script for a Container and/or Dynamic Item. This is used to control re-execution of scripts when the script version changes, or when a new script is added.	:fp_schema
dyn_table_script_type	false	Dynamic Table Script Type	The type of Dynamic Table script, which is important for locating and re-running the script if need be. Examples include: Activity Data Mart Creation, Status Change Data Mart Creation. Generally, the scripts can be run post level (container, Item) creation using the Type Order and then the Script Order.	:fp_schema
dyn_table_spec	false	Dynamic Table Specification	The table specifications for a physical database table associated with a dynamic item. A table will be created or altered to match this specification.	:fp_schema
e_718	false	E/718		
email_filter	false	Email Filter	This associates one of the four filter types with the definition for the "System Manufacturer" id. The actual text string that is the filter value will be stored in the configuration setting data pattern. Additionally, Footprints allows this setting to be overridden at the workspace level. These settings would be tied to the individual workspace ids and be governed by the precedence settings.	
email_filter_spec_type	false	Email Filter Specification Type	This section is for setting up the no accept, no send, only accept, only send files in FootPrints. When an address or domain matches what is in each file, it will either only send/accept to/from that address or it will not send/accept to/from that address accordingly.	
email_incoming_history	true	Email Incoming History	This table is to support the requirement from the SRS concerning a possible email loop. FFR-01. The system must be able to manage "Email loops". This refers to when an automatic response triggers another automatic response. This may be triggered by "Vacation" emails, email bounce messages, delivery replies, read receipts, etc. Currently the System manages this by blocking a sender if 5 of the last 15 emails from this sender have the same Subject and same first 50 characters of the body. This has been taken out of this particular feature. Rob Accardi 11/8/11	
email_keyword	false	Email Keyword		
email_notifn	false	Email Notification	An email notification entry.	:fp_schema
email_notifn_attnch	false	Email Notification Attachment	A link to an email attachment used for a notification email.	:fp_schema
email_notifn_type	false	Email Notification Type		
email_protocol_type	false	Email Protocol Type		
email_tmpl	false	Email Template	For html and text	
email_text	false	Email Text	Represents the header and footer text edit options.	
email_wksp_connection	false	Email Workspace Connection		
event	true	Event	An event is an action that is usually initiated outside the FootPrints application and that is handled by a piece of code inside the program.	
event_wkflw_proc_defn	false	Event Workflow Process Definition		
extl_data_source_defn	true	External Data Source Definition	The abstraction of the structural and behavioral source information that is configurable by the system designer and/or the end user at definition time that specifies	

			the file or other data source used for input or archiving.	
extl_data_source_defn_db_obj_d	false	External Data Source Definition Database Object Definition		
extl_feed_last_run	false	External Feed Last Run	The last run date and time of an external feed.	:fp_schema
extl_item	true	External Item		
extl_item_mbr	true	External Item Member		
extl_saas_sys_cust	true	External SaaS System Customer	A customer that uses SaaS to supply needed software functionality.	
extl_saas_sys_prvdr	true	External SaaS System Provider	An external service provider that delivers software services through the web. This provider delivers service based on set license and delivery models.	
extl_sys_certificate	false	External System Certificate	Holds information about external system certificates.	:fp_schema
field_data_visibility	false	Field Data Visibility	Short list of what just changed and description.	
field_dtype	true	Field Datatype	The type of field (i.e. a custom field that the users have defined).	
field_defn	true	Field Definition	The definition of a Field, including persistence information and UI information. Some fields will be defined as database fields, and other fields will be defined as calculated fields. The field will have data types and associations to business rule definitions. Some fields are built-in, some are defaults from templates, and some are custom fields.	
field_dpncy_rule	true	Field Dependency Rule	A field dependency rule constrains some aspect of the associated field. It is intended to assert business structure or to control or influence the behavior of the business.	
field_info	false	Field Information	This represents the Incident Information and Address Book Fields edit options.	
field_status_matrix	false	Field Status Matrix		
field_type	false	Field Type		
fields	false	Fields		
file_info	false	File Information	The URI in this table is a unique string identifier that points to the file stored in the jackrabbit tables. This table is intended to be stand alone, and the application code will use the URI to actually do a lookup of the things that are attached to this file.	:fp_schema
foo	false	Foo		
fp_db	false	FootPrints Database	Address Book entries maintained in the FootPrints Database	
fp_intrnl	true	FootPrints Internal	This method details how FootPrints will maintain its own database of users and passwords.	
global_cntr	true	Global Container	A container for Global Items at the Instance level. This would be a place to store cross-container Item Relationships and User Roles information etc. It is possible that a Container would be stored in a separate Database Schema to provide namespace and security isolation. It is unclear if having an Instance Schema would suffice for instance-level tables, or whether the added semantics of an Instance Container is helpful. This Global Container is one of the Containers related to the Instance. It is unclear if the Instance itself is a subtype of Container. Perhaps a Container Storage class would be defined in the UML Domain model.	

header_text_var_list	false	Header Text Variable List		
horizontal_alignment	true	Horizontal Alignment	Gives the basic horizontal reference values: Right, Center, Left.	
id_generator	false	Id Generator	A table of incremental ids used as table primary keys and object identifiers.	:fp_schema
imp	false	Import		:fp_schema
imp_asgnmt	false	Import Assignment	The default assignment details for an Import Job.	:fp_schema
imp_data_encoding_type	false	Import Data Encoding Type	Import data encoding types include: server default, or UTF-8.	
imp_defn_rule	false	Import Definition Rule	This table contains the information necessary for the application to do a conditional flow in the processing based on a text string (defn value).	:fp_schema
imp_error_result	false	Import Error Result	A list of errors that occurred during the execution of the import.	:fp_schema
imp_execn_record	false	Import Execution Record	A log of the execution of an import.	:fp_schema
imp_schdd_task	false	Import Scheduled Task		
imp_type	true	Import Type	Import types include; devices, software items, software relationships, or network relationships.	
imp_user_wksp_role	false	Import User Workspace Role	An association between an Import and a role.	:fp_schema
inbd_email	true	Inbound Email	A record of an email received by Footprints via a configured account. Generally, the email is deleted from the email system after successful processing.	
incdnt	false	Incident	An item that allows input or display of incident information.	
incoming_email	false	Incoming Email		
incoming_email_cfg	false	Incoming Email Configuration		
incoming_email_filter	false	Incoming Email Filter		
index_type	false	Index Type	The type of index. Values include: Primary, Unique, Full-Text, Regular, Reverse Key, Computed Reverse Key	:fp_schema
intrnl_id_type	false	Internal Identifier Type	There are identifiers that are created by Numara Software that are used internally to uniquely identify elements. These are serial ids that will never change. There are also types of serial ids that may be used for configuration data, picklist data, etc. This Type provides a different domain of values for those keys.	:fp_schema
item	true	Item	The Item is the abstract class for Issue, Configuration Item, Address Book entry, and other information items that are the main information entities in FootPrints. The Item structure and behavior is defined by its Definition. The Item is namespaced, identified by, and logically stored in the single parent container. It can be referenced in the same manner both inside and outside the container. The Item is the storage model and the implementation for the Item Definition. There are many important specializations of the Item class, and there even more Template definitions of Container/Item that provide an end-user application experience to the End-User. The Item implementation must implement flexible schema in an easy to manage, well engineered, and high performing way. The item can store user-defined and user-named fields defined in its definition. The Item should implement an inheritance model for Item subtypes, and have the ability to represent collections of subordinate items. The Item data can be imported, exported, or synchronized with external data sources. The Item data can be linked and synchronized with other items in the same instance.	

item_attach	false	Item Attachment	The link between a file stored in jackrabbit and a container item.	:fp_schema
item_defn	true	Item Definition	The definition of an Item, which includes the Item Name and localizations and the collection of Item Fields. It also includes customizations and localizations of string resources for Item Names, and Item Field names.	
item_field	true	Item Field	A place related to a specific item that stores or displays data.	
item_field_coll	false	Item Field Collection	Holds an unordered collection of string field values for an Item. Used for picklists and multiple selections. All multiselect fields are stored here. This table can be implemented as a global system table, container-level table, or item-level table. Currently it is a system level table.	:container_schema
item_field_defn	true	Item Field Definition	Item Field Definition is an association between the Item Definition entity and the Field Definition entity. This association contains a distinct value for each of the intersection points between the two entities.	
item_field_journal	false	Item Field Journal	Holds a collection of field values for strings, each of which has create information for the current state of the field. Used when an Item has a multi-line edit field with the journaling feature turned on. One table is used at the container level for performance.	:container_schema
item_lock	false	Item Lock	A pessimistic lock of a dynamic item instance. The lock helps implement single session editing of an ticket item , cmdb item, solution item, or any other item in the system.	:fp_schema
item_reln	false	Item Relationship	An Item Relationship is a relationship between instances contained in two Dynamic Object generated Tables. For example, the following. A Configuration Item Type ("Computer") related to an Workspace Item ("Incident"). An Address Book Entry ("Contact") related to another Address Book Entry ("Master Contact"). A Dynamic Link between an Incident in Workspace 1 ("Current Tickets") and Workspace 3 ("Archive Workspace"). A Dynamic Link between an Incident in Workspace 1 ("Current Tickets") and Workspace 5 ("Change Management"). There are no foreign keys defined.	:fp_schema
item_reln	true	Item Relationship	A Relationship among Items of various types. The Relationship Members include any type of Item. Current FP has many different relationship tables for CI relationships, Issue Relationships (Global/Local) and (Static/Dynamic), Quick Issues, Address Book Entries, CI Issue Links. The Relationship has a collection of 1 or more members vs. having a strict binary definition.	
item_reln_defn	true	Item Relationship Definition	The definition of a Relationship type within the Container Definition. This has important Configuration_Settings and Application Element Identifier values that clarify the meaning of the Relationship to programming code.	
item_table_1	false	Item Table 1		
item_table_2	false	Item Table 2		
item_table_3	false	Item Table 3		
item_useful_dtl	false	Item Useful Detail	An entry from an agent or customer classifying the quality and usefulness of an knowledgebase item or other item.	:fp_schema
item_useful_sumry	false	Item Useful Summary	A standalone table holding a summary count of the usefulness of an Item, computed by summing the detail.	:fp_schema

item_vote	true	Item Vote	The record of a vote on a specific item. The current effective vote is maintained here, history of conflicting changes is in the Audit Trail.	
job_cfg_dtl	false	Job Configuration Detail	The job configuration details that will be used to create jobs on the job scheduler.	:fp_schema
job_schedlr_cfg	false	Job Scheduler Configuration	An instance of job scheduler used for background job execution. Currently, the Quartz job scheduler is used. Usually one instance is sufficient.	:fp_schema
knowledge_base_cntr	true	Knowledge Base Container	A container for knowledge base information.	
last_run	false	Last Run	The last run of the twitter sync process. (Table created but not yet in use)	:fp_schema
ldap	true	LDAP	The Lightweight Directory Access Protocol, or LDAP, is an application protocol for querying and modifying data using directory services running over TCP/IP. In LDAP, authentication is supplied in the "bind" operation.	
lic_type	false	License Type	A lookup table for the type of FootPrints license. Must be secure from tampering.	:fp_schema
life_cycle_event	false	Life Cycle Event	This may come into play for the "First Contact" which is defined as: From Ursula Strahm (3/23/2012) First Call from the Executive Dashboard SRS: First Call - The elapsed time between the From and To Event is 0 for the current Widget configuration. Examples of this are: i. The Issue is created in the "To Event" status. In this case, the Issue will always show in the First Call bucket. ii. Issue went from Created to "To Event" status outside of working hours and the Widget is configured to display "Work Hours" iii. Issue was Created in a "does not count for time" status and it stay in "does not count for time status" until it reached the to "To Event" and the Widget is configured to "only account for time spent in statuses included in the Issue Lifecycle Time Measurements"	:fp_schema
link_type_defn_ver	true	Link Type Definition Version	A definition version instance that describes the link properties. This design allows the link properties to be dynamically defined by configuration settings. That way links can add behavior in the future without affecting existing data.	
load_events	false	Load Events	This entity holds the information currently needed by the import functionality for both the address book (administration->load data) import and the workspace information (administration->workspace->workspaces) import.	
locale	false	Locale	A language and locale used to identify a specific dialect. It is used to determine variable forms of words, idioms, numeric format, date format, images, colors, etc. "en-US" for example is United States English, "es-LA" for Latin American Spanish.	:fp_schema
local_col	false	Localized Column	(Not used, but referenced in Java code that must be removed before table deletion.) (Not currently used. Data localization is implemented in Configuration Setting Value. May be retired in the future). A Database Column name used in the Transparent Database Localization pattern. The data in the column is the original data for which a translated value can exist. In the case of English, this is a little strange because the English translation can be different	:fp_schema

			than the original data.	
local_col_val	false	Localized Column Value	(Not used, but referenced in Java code that must be removed before table deletion.) (Not currently used. Data localization is implemented in Configuration Setting Value. May be retired in the future). A data value from a column and row in a Localized table. The initial english value is obtained from the table, but may be modified for visual display purposes. The Primary Key identifier of the source table is used along with the table name to establish the row identity.	:fp_schema
logical_data_type	false	Logical Data Type	A reference table for logical data type. The logical type maps to the database type in DDL generation.	:fp_schema
mgd_svc_prvdr	true	Managed Service Provider	A service provider that manages the day to day administration of software.	
mgd_svc_prvdr_cust	true	Managed Service Provider Customer	A customer that uses software services that are managed by a separate provider.	
addr_book_entry	true	Master Contact Item	A contact that belongs to the FootPrints address book. This could be implemented as a specialization of Item which has the needed features of flexible schema, and data mapping adapters.	
metric_defn	true	Metric Definition	The definition of the level of service in the service level agreement.	
metric_threshold	true	Metric Threshold	The agreed upon levels of service.	
msft_crm_addr_book	false	Microsoft CRM Address Book	Configuration information for the Microsoft CRM Address Book Link.	
namp_authcn	false	NAMP Authentication	Although a default login can be set to use whenever an Agent needs access to the integrated NAMP features. Agents can also enter their own credentials to allow for flexibility. The NAMP Authentication is only used for agents.	
notifn	true	Notification	An automated email sent as a result of system activity and notification settings.	
notifn_attr	false	Notification Attribute	On the "Configure Email Notification Templates" screen, the current application lists the possible field contents that outgoing emails can have. There is a column of checkboxes for each type of mail sent and a row for each field. This table lists the fields and the edit options that are listed on the application screen. When combined with information from the Outgoing Notification Type table, the actual setting can be found in the configuration setting data pattern tables.	
notifn_recipient_status	false	Notification Recipient Status	Manages the sent and received status of the distribution list of contacts for a notification.	
notifn_tmpl	false	Notification Template	This is just an idea so far. We understand that the System should have a template that would apply to all emails sent. A Master Template should be selected for mobile devices as well.	
notifn_tmpl_attr	false	Notification Template Attribute	This is the association of Field Name/Attribute, outgoing email, and possible status that indicate the different configuration settings for the "Email notification Templates". It is possible that a view will be used to give a more flattened, denormalized view of the information.	

notifn_tmpl_type	false	Notification Template Type	Can be master, custom, introductory email	
number	true	Number	For example the price of a product. Whole numbers and non-whole numbers are not distinguished; there is only a single number type. So for example 3/2 will be always 1.5, and never 1. Just like if you are using a calculator. If you want to give a numerical value directly in the template, then you write for example: 150 or -90.05 or 0.001. (More details regarding the syntax can be found later.)	
on_site_sys_cust	true	On Site System Customer	A customer that is co-located with the provider of software services.	
on_site_sys_prvdr	true	On Site System Provider	A System Provider that is co-located with the customer.	
op	true	Operation	Pertaining to a process or series of actions for achieving a result.	
op_visibility	true	Operation Visibility	Whether or not a user can see the operation.	
option_set	true	Option Set		
outbd_email	true	Outbound Email	A record of an email sent by Footprints via a configured account.	
outgo_notifn_type	false	Outgoing Notification Type	There are four different types of outgoing emails (Assignee, Customer, CC, and Wireles/Pager), each with customizable contents, depending on what type of user they are going to and whether the user is assigned to the Issue or is getting a one-time notification.	
part_of_speech	true	Part Of Speech	A picklist table for the English Part of speech that best describes the resource. e.g. Verb, Noun, Sentence	
pwd_reset_question	false	Password Reset Question	Questions, once they've been saved, can only be disabled (deactivated). Users who have already used those questions as part of their password reset registration will still be able to use the disabled questions.	:fp_schema
pwd_reset_question_answer	false	Password Reset Question Answer	This table holds the users' answers to the system questions set by the administrators and the Id to the actual question. Users can answer questions even after the administrator has disabled them, as long as they were available when the user first registered the answer.	:fp_schema
pwd_reset_regtd_acct	false	Password Reset Registered Account	This holds LDAP information.	:fp_schema
pend_advn_actn	false	Pending Advanced Action	An advanced action to be taken by integration with Asset Core.	:fp_schema
pim_appt_info	false	PIM Appointment Information	Information about calendar appointment synchronization with external calendars in a Personal Information Manager (PIM) such as a computer or phone calendar system.	:fp_schema
pim_record_info	false	PIM Record Information	Information about calendar appointment data (such as the workspace and ticket number) synchronization with external calendars in a Personal Information Manager (PIM) such as a computer or phone calendar system.	:fp_schema
portal	false	Portal	A portal in the FootPrints 12 User Interface.	:fp_schema
portal_console	false	Portal Console	The association between a Console and a Portal.	:fp_schema
prefc_grp	true	Preference Group		
prsnntn_mode	true	Presentation Mode	A code representing the logical mode of UI presentation. The code is used to categorize UI Element size and capabilities. Examples include: "Full View", "Quick View", "Mobile View".	

prev_timing	false	Previous Timing	A table with a generic timestamp. The timestamp is used to give the timestamps of previous and second previous timestamps according to a step as specified in the choices the user has for comparison reports.	:fp_schema
prmry_authcn	true	Primary Authentication	The primary authentication designation. Each FootPrints user may be assigned either the primary or secondary authentication method. Only the assigned method will be attempted when a user tries to authenticate.	
prod_rise	false	Product Release	The information describing the particulars of the release of the product (i.e. date).	:fp_schema
prod_ver	true	Product Version	Information on the exact software version of the Numara products installed on the system.	
publ_error	false	Publish Error	An error that occurred during publishing.	:fp_schema
publ_log	false	Publish Log	A log of container and item publish actions. The definitions are used to create schema, table, view, stored procedure, and index objects in the relational database in order to store dynamically defined information.	:fp_schema
read_only	true	Read Only CMDB Role	A Read Only CMDB Role.	
recur_period_type	false	Recur Period Type	The recurrence type. Choices include No Recurrence, Daily, Weekly, Monthly. This is an enum table that must be kept in sync with the application code. It explains the values for database queries only, and is not mapped for application access.	:fp_schema
recur_schd_type	false	Recur Schedule Type	The Schedule type. Choices include IMMEDIATELY/ SCHEDULED_ONCE/ MANUAL_ONLY. This is an enum table that must be kept in sync with the application code. It explains the values for database queries only, and is not mapped for application access.	:fp_schema
recurring_schd	true	Recurring Schedule	Currently set to optional or mandatory.	
recurring_schd_days_of_week	true	Recurring Schedule Days Of Week		
recurring_schd_period_type	true	Recurring Schedule Period Type	Schedule types include: immediately, specific time/ date, recurring, manual only.	
reln_defn	true	Relationship Definition	The definition of a Relationship type within the Container Definition. This has important Configuration_Settings and Application Element Identifier values that clarify the meaning of the Relationship to programming code.	
reln_defn_mbr	true	Relationship Definition Member	The definition of a Relationship Member type within a Relationship Definition, including the Type of member, and the Relationship Role of the Member within the relationship. This has important Configuration_Settings and Application Element Identifier values that clarify the meaning of the Relationship to programming code.	
rpt	false	Report	A dashboard report definition. The report information is used with the Logi Analytics embedded reporting engine to render reports in the UI.	:fp_schema
rpt_cfg	false	Report Configuration	Configuration data values associated with a dashboard report.	:fp_schema
rpt_format	false	Report Format	Report Format such as PDF, EXCEL.	:fp_schema
rpt_schdd_task	false	Report Scheduled Task	The report schedule is association between a report and the scheduled task. Report schedule specific information can also be placed here.	:fp_schema

rpt_visibility_type	false	Report Visibility Type	A lookup table for report visibility type. Values include: Private, Shared.	:fp_schema
rqst_for_chg_item	true	Request For Change Item	An item that allows input or display of information regarding a request for change.	
role_cntrn	true	Role Container	This represents the association (link) between the role and the container. Example: Role and Workspace If the Workspace Administrator role has an association with the Service Desk workspace, this would contain the identification information for both showing this link.	
role_grp	false	Role Group	(not used) The role group will contain the roles that the user has for each of the workspaces that the user has access. The user will always have a role group even if the administrator chooses the Perl Footprints functionality.	:fp_schema
role_grp_role	false	Role Group Role	(not used) an association table that resolves the many to many relationship between the Role Group and the Role entities.	:fp_schema
role_type	false	Role Type	ws2 asked to drop this. Indicates whether this is an agent role or a customer role.	:fp_schema
rule_usage_statistic	false	Rule Usage Statistic	A table that records statistics on rule usage.	:fp_schema
salenet_addr_book	false	Salenet Address Book		
salesforce.com_addr_book	false	Salesforce.com Address Book	Address Book entries accessed via a Web Service API from Salesforce.com.	
saved_search_result	false	Saved Search Result		
schd	false	Schedule	A personal or workspace calendar in Footprints. It is used to define work hours and settings for appointment scheduling and metric reporting. This table is duplicate re-persisted data whose master copy exists in the Calendar Service tables. Only the attributes that are required by reporting and other services that access the database and cannot make a call to Java should be replicated here.	:fp_schema
schd	true	Schedule		
schd_actual_period	false	Schedule Actual Period	Given the definitions of the standard work periods and holidays, these are the actual work periods. If overlapping shift work periods are defined, the time ranges here represent all shifts. This makes it easier to do math against working hours. In FootPrints Perl, this table is generated by the Perl calendar code, so that the dashboard can use the information in the calculation of work hours elapsed. The only purpose of this table is to make it possible to calculate the work hour time difference between two dates. A program that can understand the Calendar Service API schedule, and any versioning of it, will compute the actual work periods and save them to this table. Then a program in the Java layer can compute the work hour difference between two dates, just as well as a program in the database layer.	:fp_schema

schd_task_run_stat	false	Schedule Task Run Statistic	An individual statistic item for a run. This has a compound key so it can be mapped as a simple key value map.	:fp_schema
schdd_task	false	Scheduled Task	A scheduled task that may include recurrence. This is all of the information needed to provide the scheduler with data to execute a task. It is used for Reports, but is intended to be generic for other scheduled tasks. This is the root object. Report specific information will go in an association table.	:fp_schema
schdd_task_notifn	false	Scheduled Task Notification	The collection of notification recipients for the Scheduled Task. Having true references here will make it easier to maintain changes to user's information such as LDAP lookup, name changes, and user deletion or replacement use cases.	:fp_schema
schdd_task_run	false	Scheduled Task Run	An instance of a run for a schedule task used for last run and previous run information. The run date and the status of the run are kept here. There is only one row per run, so the time of each status change is not known.	:fp_schema
schdd_task_stat	false	Scheduled Task Statistic	A named statistic that can be associated with a run. This allows free form name value statistics to be dynamically associated with the run.	:fp_schema
schdd_task_status	false	Scheduled Task Status	The run status enumeration. Choices include Scheduled, In Progress, Completed, Completed with Errors.	:fp_schema
schdd_task_type	false	Scheduled Task Type	A lookup table for the Scheduled Task Type that must be kept in sync with an enumeration in the Java. Values include: IMPORT_USER, MASSS_EMAIL, REPORT_SCHEDULE etc.	:fp_schema
search_col	false	Search Column	The number and order of search result columns returned when the search is executed.	:fp_schema
search_cond	false	Search Condition	The set of logical search conditions for the query. This is rendered into the actual SQL or filtering code.	:fp_schema
search_cstr_type	false	Search Constraint Type	A lookup table for the various operators that can be used in a search condition. These are logical operators.	:fp_schema
search_item_query	false	Search Item Query	Identifies the specific item definitions associated with the search query to aid in visibility and permissions.	:fp_schema
search_query	false	Search Query	The root table for saved searches. It names the search, and indicates the visibility in various parts of the application. The search is saved in an implementation neutral format so that it can be used in many different layers.	:fp_schema
search_view	false	Search View	The UI details of the default view of the saved search.	:fp_schema
secondary_authcn	true	Secondary Authentication	The secondary authentication designation. Each FootPrints user may be assigned either the primary or secondary authentication method. Only the assigned method will be attempted when a user tries to authenticate.	
secuty_binval	false	Security Binval	Apache JackRabbit Content Repository Table. Access via JCR API.	:content_repository
secuty_bundle	false	Security Bundle	Apache JackRabbit Content Repository Table. Access via JCR API.	:content_repository
secuty_names	false	Security Names	Apache JackRabbit Content Repository Table. Access via JCR API.	:content_repository
secuty_permsn	true	Security Permission	Authorization granted to access a system resource.	
secuty_policy	false	Security Policy	A XACML security policy.	:fp_schema
secuty_refs	false	Security Refs	Apache JackRabbit Content Repository Table. Access via JCR API.	:content_repository
secuty_right	true	Security Right	Rights granted to access a system resource.	

svc_rqst	true	Service Item	A Service Item in a Service Portfolio container. An item representing a provided or available software service or functionality.	
svc_level_agrmt	true	Service Level Agreement	A service level agreement (frequently abbreviated as SLA) is a part of a service contract where the level of service is formally defined.	
prob_item	true	Service Level Target Item	A Service Level Target Item in a Service Portfolio container.	
svc_ctlg_cntnr	true	Service Portfolio Container	A catalog of services that an IT user can use on service requests. This is a type of Configuration Item.	
shared_cust	true	Shared Customer	A shared customer does not have a unique identity at login, but uses a customer account with permissions according to this shared customer identity.	
shared_cust_prof	true	Shared Customer Profile	A user profile that is shared among a group of many users. It is used for shared customer authentication.	
simple_list	false	Simple List		
snapshot_cfg_setting_val	false	Snapshot Configuration Setting Value	Configuration Setting Value is an association between the Configuration Setting entity and a container entity (i.e. User Profile, Role, and Definition). This association contains a distinct value for each of the intersection points between the two entities.	:fp_schema
snapshot_defn	false	Snapshot Definition		:fp_schema
snapshot_defn_reln	false	Snapshot Definition Relationship	All relationships between definitions are stored in this table in order to make the model able to handle new relationships without changes to tables.	:fp_schema
snapshot_defn_ver	false	Snapshot Definition Version	A version of a Definition with a version identifier that changes when data changes are made to the template. The definition version will suffice to store the current state of the FootPrints Configuration. A full copy of the definition tree is versioned when a container is published. See the database views v_defn_ver_active, v_cntnr_item_field.	:fp_schema
snapshot_defn_ver_assoc	false	Snapshot Definition Version Assoc		:fp_schema
snapshot_status	false	Snapshot Status		:fp_schema
snapshot_type	false	Snapshot Type		:fp_schema
soln_item	true	Solution Item	An item that stores the solution information for a particular issue.	
sql_db	true	SQL Database		
standard_agent_prof	true	Standard Agent Profile	Permissions for a User to access a workspace according to the capabilities defined in the role. Also, configuration settings for the User in that workspace. This is no more than a default built in profile with the name of "Workspace Administrator" which can be changed later by the System Administrator.	
status	false	Status	The actual status word. Beyond the name, there is really no special functionality. The name is simply used to order the items.	
status_alias	false	Status Alias		
status_list	false	Status List	There are currently four lists of status: incident, solution pending, solution approved, and dashboard (which contains incident).	
status_list_status	false	Status List Status		
status_status_matrix	false	Status Status Matrix		
string	true	String	It is simple text, e.g., the name of a product. If you want to give a string value directly in the template, rather than use a variable that comes from the data model, you write the text between quotation marks, e.g., "green mouse" or 'green mouse'. (More details regarding the syntax can be found later.)	

string_rsrc_val	false	String Resource Value	The translated value of the resource.	:fp_schema
string_usage_type	false	String Usage Type	The Usage Type of a String Resource by an Application Element, for example Label, ToolTip, Accessibility, Help Text, Data Display Value, etc. The types may be appropriate by Application Element Type.	:fp_schema
substn_var	false	Substitution Variable	<p>System Level Customization Email :</p> <p>_USERNAME_ User's name</p> <p>_ADMINEMAIL_ Workspace administrator's email</p> <p>_PROJNAME_ Workspace name</p> <p>_FROMNAME_ Email "from" name (if different than "FootPrints")</p> <p>Workspace Level Customization Email Header and Footer:</p> <p>_WHONAME_ : Name of user who created/edited Issue</p> <p>_WHOMAIL_ : Email address of user who created/edited Issue</p> <p>_WORKSPACENAME_ : Workspace Name</p> <p>_ENTRYTITLE_ : Title of Issue</p> <p>_ENTRYNUMBER_ : Issue number</p> <p>Workspace Level Data</p> <p>Keywords - Subject Line:</p> <p>Field Keyword</p> <p>Workspace Name %%</p> <p>ATTRIB_PROJECT_NAME%%</p> <p>Workspace ID %%</p> <p>ATTRIB_PROJID%%</p> <p>Title %%ATTRIB_TITLE%%</p> <p>Issue Number %%</p> <p>ATTRIB_NUMBER%%</p> <p>Last Edit Date %%</p> <p>ATTRIB_LAST_DATE%%</p> <p>Last Edit Time %%</p> <p>ATTRIB_LAST_TIME%%</p> <p>Priority %%</p> <p>ATTRIB_PRIORITY%%</p> <p>Status %%</p> <p>ATTRIB_STATUS%%</p> <p>Creation Date %%</p> <p>ATTRIB_CREATION_DATE%%</p> <p>Creation Time %%</p> <p>ATTRIB_CREATION_TIME%%</p> <p>Creator %%</p> <p>ATTRIB_CREATOR%%</p> <p>Assignees %%</p> <p>ATTRIB_ASSIGNEES%%</p> <p>CC's %%ATTRIB_CC%%</p> <p>Linked CI %%ATTRIB_CI%%</p> <p>Problem Type %%PROBLEM-TYPE%%</p> <p>Field1 %%FIELD1%%</p> <p>Field2 %%FIELD2%%</p> <p>Category %%CATEGORY%%</p> <p>Symptom %%SYMPTOM%%</p> <p>Error Message %%ERROR-MESSAGE%%</p> <p>Platform %%PLATFORM%%</p> <p>Root Cause %%ROOT-CAUSE%%</p> <p>Respond By Date %%</p> <p>RESPOND-BY-DATE%%</p> <p>Scheduled Work Date %%</p> <p>SCHEDULED-WORK-DATE%%</p> <p>Due Date %%DUE-DATE%%</p> <p>If OTHER please specify %%</p> <p>IF-OTHER-PLEASE-SPECIFY%%</p> <p>SLA Due Date %%SLA-DUE-DATE%%</p> <p>SLA Response Time %%SLA-RESPONSE-TIME%%</p> <p>Part1Price %%</p> <p>PART1PRICE%%</p> <p>Part1Quantity %%</p> <p>PART1QUANTITY%%</p> <p>Part1Total %%</p> <p>PART1TOTAL%%</p> <p>Part2Price %%</p> <p>PART2PRICE%%</p> <p>Part2Quantity %%</p> <p>PART2QUANTITY%%</p> <p>Part2Total %%</p> <p>PART2TOTAL%%</p> <p>Grand Total %%GRAND-TOTAL%%</p> <p>Dan's Test Field %%DAN-TEST-FIELD%%</p> <p>Submitted By %%</p> <p>SUBMITTED-BY%%</p> <p>Last Name %%LAST-NAME%%</p> <p>First Name %%FIRST-NAME%%</p> <p>Email Address %%EMAIL-ADDRESS%%</p> <p>User ID %%USER-ID%%</p> <p>Phone %%PHONE%%</p> <p>Site %%SITE%%</p> <p>Department %%</p>	:fp_schema

substn_var_type	false	Substitution Variable Type		:fp_schema
subtype	false	Subtype		
subtype	false	Subtype		
subtype	false	Subtype		
supertype	false	Supertype		
survey_item	true	Survey Item	An item that allows input or display of survey information.	
survey_sent	false	Survey Sent	A record of a survey sent to an application user.	:fp_schema
syncing_job_dtl	false	Syncing Job Detail	A table used to control syncing of Calendar Items with a computer or phone calendar system.	:fp_schema
sys_admin_prof	true	System Administration Profile	Permissions for a User to access the FootPrints system according to the capabilities defined in the role. Also, configuration settings for the User.	
sys_admin_role	true	System Administrator Role	A built in role that identifies a user as a system administrator, and also provides more specific information about the application behavior for the agent.	
sys_component	false	System Component	A lookup table for System Component. System Component is used to identify an area of the system. The primary use is when a component is updating system information with a transaction that is not initiated from a customer or agent.	:fp_schema
sys_env	true	System Environment	The System layer is applicable to the SaaS environment only, and represents information about the hardware and software environment which hosts the Instance. It would be used in Use Cases such as installing, moving instances, finding and connecting to an Instance, performance monitoring and instance.	
sys_log	true	System Log	Information Logged by various system components for the purpose of debugging. Generally, this information is not stored in the database because the database may not be available during error conditions.	
sys_mfgr	true	System Manufacturer	The System Manufacturer is the term given to the Independent Software Vendor for the FootPrints software. There is one instance of this entity. We need a term that does not include our company name or our product name so that renaming is not necessary in the event of changes. Numara Software is always the System Manufacturer, so we don't need very information much at the Instance level other than localizations. The System Manufacturer it is relevant to interfaces with the Manufacturer's other systems.	

sys_prefc	true	System Preference		
sys_prvdr	true	System Provider	The System Provider is a business entity that provides the hosted FootPrints application to Tenants in a multi-tenant sense. The System Provider is in the business of providing FootPrints application setup and configuration services so that the Tenant can access a live working system.	
sys_session	false	System Session	Deprecated in favor of a new locking mechanism.	:fp_schema
table_col	true	Table Column		
target_dbms	false	Target DBMS	A lookup table for the Target Database Management System types. Values include: SQLServer, PostgreSQL, MySQL, Oracle.	:fp_schema
target_match	false	Target Match		:fp_schema
target_match_type	false	Target Match Type	A lookup table for the XACML target match type. Values include ACTION, RESOURCE, SUBJECT	:fp_schema
tdefn	false	tDefn		
tdefnreln	false	tDefnRelationship		
tdefnsubtype	false	tDefnSubtype		
tdefntempl	false	tDefnTempl		
tdefntype	false	tDefnType		
team	false	Team	A team is a group of application users that can be used in Team level assignments.	:fp_schema
team_email_notifn_type	false	Team Email Notification Type	When Issues are assigned to this team, all members of the team will Receive email notifications for all activity on the Issue: Always Only when no individual agents are assigned Never (Note that email to members will follow the workspace preferences for assignees defined on the Mail Preferences page. Also, any individual assignees will receive mail according to the workspace preferences regardless of what teams are assigned.)	:fp_schema
team_item_association	false	Team Item Association	This contains the association between the team, the team assignment method and the item types. This is new functionality, as opposed to the current application that sets the assignment method directly on the team. The change was due to the new concept of multiple items in a workspace.	:fp_schema
tmpl	true	Template	A template for a Definition, consisting of a set of properties, values and Configuration Settings. The Template has a name and other properties, and contains a reference to a Definition.	
tmpl_app_role	true	Template Application Role	The role template will function as a system predefined role that can then be linked to workspace roles. Changes made to the system role will be reflected at the workspace level until the connection is broken. This system role's connection to the workspace role will be in effect until any change is made to the workspace role. It then gets copied over as a stand alone role. 12/8/2011 The Role Template will be implemented as a subtype of role.	

tmpl_attr_defn	false	Template Attribute Definition	A list of substitution attributes that can be used in an email template.	:fp_schema
tmpl_ctgy	false	Template Category	A category of template, for example Email Template Definition.	:fp_schema
tmpl_content_type	false	Template Content Type	A lookup table for the type of template content. Values include: PLAINTEXT, HTML.	:fp_schema
tmpl_defn	false	Template Definition	A template used for notifications or description content with substitution attributes.	:fp_schema
tmpl_defn_attr	false	Template Definition Attribute	The collection of template attributes associated with an instance of template definition.	:fp_schema
tmpl_grp	false	Template Group	A group of templates.	:fp_schema
tmpl_level	false	Template Level	ws2 asked to drop this. A lookup table for the level that applies to a built-in instance of Role, Profile, or other object. The values include System, Workspace, Address Book, CMDB, Knowledge Base. These can be similar to Definition Types and Subtypes for Containers, but are a smaller list of values.	
tmpl_package	false	Template Package	A template specification that can be used to create an Item, Container, or Group of Containers.	:fp_schema
tmpl_package_type	false	Template Package Type	A lookup table for the Template Package Type. Values include: BUSINESS_PROCESS, CONTAINER_ITEM	:fp_schema
tmpl_text_keywords	false	Template Text Keywords		
tenant	true	Tenant	The Tenant is an owner of one or more FootPrints Tenant Partitions that are configured and maintained by a System Provider. A customer that purchase FootPrints is a tenant in the sense of multi-tenant architecture, even if the Tenant does not use Numara SaaS hosting and installs and maintains the system themselves.	
tenant_parttn	true	Tenant Partition	An installation of the FootPrints product that is isolated from other installations in both security and design definition and configuration. The Instance is the global layer above the Container which hosts the Definitions and the implementations of the Containers, and hosts system level information such as the Users and Roles. In current Footprints, this is the root folder and the install schema for the database tables.	Cust1_FP1
tenant_parttn_defn	true	Tenant Partition Definition	The Root Node definition object that links to configuration settings and properties and the instance level, and also has the collection of Container Definitions below it.	
text_file	true	Text File		
ticket_alert	false	Ticket Alert		
wksp_item	true	Ticket Item	A specialization of Item contained in a Workspace container. Workspace Items are tracked for resolution and closure, and have parties that are awaiting resolution and closure, and responsible parties that perform work against them.	
time_dim	false	Time Dimension	A table with a generic timestamp. The timestamp is broken up into the specific pieces that the reports need to slice the information according to the user specifications.	:fp_schema
time_tracking	false	Time Tracking	A table of time tracking entries used to accumulate a log of time spent on ticket editing and viewing.	:fp_schema
time_tracking_type	false	Time Tracking Type	The type of time tracking entry. Values include AUTOMATIC, MANUAL_DURATION, MANUAL_RANGE.	:fp_schema

time_zone_local_hour	false	Time Zone Local Hour	A bridge table that provides the UTC begin and End Hour datetimes for a local hour in an Olson timezone region. This table is used in Trend Reporting to give a high performance date calculation so that local hours and days can be used on graph axes and report heading with calculated totals. It is also used to load the summary tables using the local time dimension. High speed correct database-side time zone conversions are made by joining to this table.	:fp_schema
time_zone_region	false	Time Zone Region	A region of the world defined in the Olson time zone database. Only the entries actually used by a FootPrints instance will be stored. The localized name of the region is provided by the Java Util. Timezone getDisplayName() method. Only the java class can be used to determine the time zone offset from GMT, which varies historically and in the future. See the Time Zone Local Hour table. Take aspirin as needed.	:fp_schema
tmp_cfg_setting_val	false	tmp_cfg_setting_val	Do not use, use cfg_setting table instead. This is a temporary use table used during the scanning of the Java Code to hold the scanned configuration settings constants. The configuration setting constants and annotations provided in the code make it possible to query the database and figure out the data content of name-value pair information that is defined and persisted in Java. In this manner, programmers can define new properties and persist them in the DB without the need to coordinate with the DBA and make changes to tables and SQL mapping and queries. This temporary table is used during code upgrade from release to release to add new configuration settings.	
to	false	To		
to	false	To		
to	false	To		
to	false	To		
to_one_entity	false	To One Entity		
to_one_or_more_entities	false	To One or More Entities		
to_zero_or_more_entities	false	To Zero or More Entities		
to_zero_or_one_entity	false	To Zero or One Entity		
tprecedlevel	false	tPrecedenceLevel		
tprecdtype	false	tPrecedenceType		
tweet	false	Tweet	A twitter tweet returned from a query.(Table created but not yet in use)	:fp_schema
tweet_twitter_query	false	Tweet Twitter Query	The association between a twitter query and the tweets returned.(Table created but not yet in use)	:fp_schema
twitter_query	false	Twitter Query	A full text query sent to Twitter to obtain a list of tweets.(Table created but not yet in use)	:fp_schema
ui_component_state	false	UI Component State	The EXTJS grid has the ability to store it's state allowing the preservation of grid layout properties. This table supports that. It might also be used for other UI control objects.	:fp_schema
ui_ele	true	UI Element	The name and identity of an Application Element that appears in the User Interface.	
ui_ele_defn	true	UI Element Definition	The UI element definition object that links to configuration settings and properties and the instance level to determine the functionality and display of a UI item.	
ui_field	true	UI Field	The name and identity of an application field element that appears in the User Interface.	
ui_field_defn	true	UI Field Definition	The field UI element definition object that links to configuration settings and properties and the instance level to determine it's functionality and display.	

ui_form	true	UI Form	The name and identity of an application form element that appears in the User Interface.	
ui_form_defn	true	UI Form Definition	The form UI element definition object that links to configuration settings and properties and the instance level to determine it's functionality and display.	
ui_tab	true	UI Tab	The name and identity of an application tab element that appears in the User Interface.	
ui_tab_defn	true	UI Tab Definition	The tab UI element definition object that links to configuration settings and properties and the instance level to determine it's functionality and display.	
unique_cust	true	Unique Customer	A unique customer has a unique identity in the system either before identification or once authentication is performed.	
unique_cust_prof	true	Unique Customer Profile	A user profile for a single unique user. This profile can be created by an administrator for agents and customers. It also can be created via auto-add for customers only.	
unique_key	false	Unique Key	One or more fields that form a primary, unique, or partially unique key that is used in searches.	
used_header_text_var	false	Used Header Text Variable		
useful_cd	false	Useful Code	A lookup table for the useful code used in grading solutions. Examples include: I - Yes, but inaccurate, N - No, Y - Yes.	:fp_schema
user_defined_agent_role	true	User Defined Agent Role	A role that identifies a user as an agent in the FootPrints system, and also provides more specific information about the application behavior for the agent. This is configured by the user or is a copy of a pre-existing role.	
user_defined_cust_role	true	User Defined Customer Role	A role that identifies a user as a customer in the FootPrints system, and also provides more specific information about the application behavior for the agent. This is configured by the user or is a copy of a pre-existing customer role.	
user_prefc_defn	true	User Preference Definition	The abstraction of the structural and behavioral preference information that is configurable by the system designer and/or the end user at definition time.	
user_prof	false	User Profile	A container for Permissions and Settings (the composite parts are the associated Role and the User Preferences). The permissions for a User to access a particular container according to the capabilities defined. In most cases this will be more defined in a subcategory. Example: Shared User Profile This profile will be shared between multiple users that access the system with the same User ID.	:fp_schema
user_prof_defn	false	User Profile Definition	This is the association table between the user profile and the several different type of configuration setting groupings.	
user_prof_type	false	User Profile Type	ws2 asked to drop this. The type of User Profile. At this time there are two choices: agent and customer	:fp_schema
user_type	false	User Type	Indicates whether this entity is of an agent type or a customer type. Also CMDB and GUEST.	:fp_schema
user_wksp_cntr	false	User Workspace Container		
valid_vals_rule	true	Valid Values Rule	A valid values rule constrains some aspect of the Footprints application to a set or range of values. It is intended to assert business structure or to control or influence the behavior of the business.	

valdn_rule	true	Validation Rule	A validation rule constrains some aspect of the associated field. It is intended to assert business structure or to control or influence the behavior of the business.	
val_type_cd	false	Value Type Code	A lookup table for the data value type discriminator. Many tables share this discriminator for name value pair datatypes. Values include: B Boolean D Timestamp - Date + Time I Integer L Long R Real Number S String T Text - long string	:fp_schema
vote	false	Vote	The vote of a single approver on a single item.	:fp_schema
vote_history	false	Vote History	The history of votes in the case that voting changes.	:fp_schema
voting_result	false	Voting Result	The root voting result entry for a ticket item that requires voting approval.	:fp_schema
vt\$item_fid_defn_networkadapte	false	vt\$item_fid_defn_NetworkAdapter	This table is used in the upgrade to 12.1.03 to identify the "Network adapter name" fields in dynamic tables like * _ws_000_asset that are too short. It is part of a bug fix to enable the insert a new asset from BCM integration with a network adapter name longer than 255.	fpscdb030_system
vt\$item_fid_networkadapter\$chg	false	vt\$item_fid_NetworkAdapter\$changes	This table is used in the upgrade to 12.1.03 to identify the "Network adapter name" fields in dynamic tables like * _ws_000_asset that are too short. It is part of a bug fix to enable the insert a new asset from BCM integration with a network adapter name longer than 255. It identifies the specific configuration settings that need to be updated.	fpscdb030_system
web_server	true	Web Server	This method details how the web server's authentication is used to authenticate FootPrints users.	
widget	false	Widget	A widget. A root widget contains subordinate widgets. Widget Types include: ACTION_PANE ADMINISTRATION ALL_ITEMS CALENDAR CHART NEW_ITEM ROOT SAVED_SEARCH_WIDGET TAB_PANE URL WIDGET_PANE	:fp_schema
wdows	true	Windows	The native MicroSoft Wdows authentication. The Windows operating systems implements a default set of authentication protocols—Kerberos, NTLM, TLS/SSL, Digest, and PKU2U—as part of an extensible architecture. In addition, some protocols are combined into authentication packages such as the Credential Security Service Provider (CredSSP), Negotiate, and Negotiate Extensions. These protocols and packages enable authentication of users, computers, and services; the authentication process, in turn, enables authorized users and services to access resources in a secure manner.	

wkflw_actn	true	Workflow Action	A workflow action that Footprints can take in response to Change Management activity or escalations or other system features that trigger actions. The change to a phase action for Approval, Disapproval, or Expiration can trigger any of these actions.	
wkflw_proc	false	Workflow Process	The Actor wants to control the state and state transitions of an Issue and associate Business Rules with those states and transitions for the purposes of tracking where in a business process an Issue is currently in, where it can go, and where it was. Requirements: Only one draft for each Workflow Process could exist in the System. Deleted drafts cannot be restored.	
wkflw_proc_defn	true	Workflow Process Definition	The management of steps in a business processes. A workflow specifies what tasks need to be done, in what order (sometimes linearly, sometimes in parallel), and who has permission to perform each task. Most tasks are performed by humans but they can also be automated processes.	
wkflw_proc_defn_wkflw_actn	false	Workflow Process Definition Workflow Action		
wkflw_proc_state	false	Workflow Process State	The workflow process state will contain values for the attributes of an Issue. Requirements: The list of all Workflow Process State values contains all choices of the Issue Field that is associated with the Workflow Process and predefined Initial State and Final State. If after prior create/edit operation the Issue matched the Defining Criteria for the Workflow Process and after current edit operation it matches the Defining Criteria for the same Workflow Process then Prior State is defined as the old (determined before the current create/edit operation) Workflow Process State Field value. If after prior create/edit operation the Issue didn't match the Defining Criteria for the Workflow Process and after current edit operation it matches the Defining Criteria then the System doesn't process the transitions from the State that corresponds to old value of the Workflow Process State Field. If the Current State is Workflow Process State that can be transitioned to from the start of the Workflow Process and after prior create/edit operation the Issue didn't match the Defining Criteria for this Workflow Process then Prior State is considered equal to Initial State. Current State is defined as the submitted during the current operation value for the Workflow Process State Field.	

wkflw_proc_state_grp	false	Workflow Process State Group	<p>Requirements: A group can contain only those Workflow Process State values that are associated with a choice of the Issue Field.</p> <p>A group cannot contain the Initial State and/or Final State.</p> <p>One Workflow Process State value can be a part of several groups.</p> <p>A group should contain at least 2 Workflow Process State values.</p>	
wkflw_proc_state_grpings	false	Workflow Process State Groupings	<p>The association table holds the states that are associated with a particular group.</p>	
wkflw_proc_state_transn	false	Workflow Process State Transition	<p>A workflow process state transition defines the "from" state and "to" state when some event has been detected and is defined as to cause a change of state.</p> <p>Requirements: The System should not allow creation of a Workflow Process State Transition that points to the Initial State.</p> <p>The System should not allow creation of a Workflow Process State Transition that points from the Final State.</p> <p>Start and end Workflow Process State values for Workflow Process State Transition should not be the same.</p> <p>Each Workflow Process State Transition should point from one Workflow Process State value to another, that is Workflow Process State Transition that either does not point to or from a Workflow Process State value should not be allowed (this will be validated in Publish Workflow Process).</p> <p>The System should not allow publishing Workflow Process with Workflow Process State value without transition to it if this Workflow Process State value is not the Initial State (this will be validated in Publish Workflow Process).</p> <p>The System should not allow publishing Workflow Process with Workflow Process State value without transition from it if this Workflow Process State value is not the Final State (this will be validated in Publish Workflow Process).</p>	

wkflw_proc_state_type	false	Workflow Process State Type	A workflow process state can be one of these values: Initial, State, Default, or Final.
wkflw_proc_wkflw_proc_state	false	Workflow Process Workflow Process State	<p>The association table holds the states that are associated with a workflow process.</p> <p>Requirements: The Workflow Process should contain Initial State, Final State and at least one Workflow Process State that is associated with a choice of the Issue Field (this will be validated in Publish Workflow Process).</p> <p>The Actor will not have to add Initial State and Final State manually. They will just exist whenever a process is created. There will be no way to delete or add them.</p> <p>The System should allow to define as default only one Workflow Process State (see Note [UI-001]).</p> <p>The System should allow to define as default only the Workflow Process State that is determined as end State for transition with start State equal to the Workflow Process Initial State (this will be validated in Publish Workflow Process).</p> <p>The definition of the default Workflow Process State is mandatory if there are at least 2 Workflow Process States that are determined as end States for transitions with start State equal to the Workflow Process Initial State (this will be validated in Publish Workflow Process).</p> <p>If there is only 1 Workflow Process State that is determined as end State for transition with start State equal to the Workflow Process Initial State then the System processes this State as default Workflow Process State automatically after the Workflow Process is published.</p>

wksp_actvy_data_mart	true	Workspace Activity Data Mart	A summarized data store of Workspace Activity metric calculations used to support the Executive Dashboard Trend Reporting feature in an upcoming FootPrints release. There is a version of this for both the FootPrints Monet (Perl) and Renoir (Java) releases. The data mart tables conform to a very specific star-schema design and must be populated using history data and an incremental feed. The Star Schema structure must be able to use custom Workspace Item Fields, so the design must be coordinated with the implementation of Workspace Item.	
wksp_admin_prof	true	Workspace Administration Profile	Permissions for a User to access a workspace according to the capabilities defined in the role. Also, configuration settings for the User in that workspace. This is no more than a default built in profile with the name of "Workspace Administrator" which can be changed later by the System Administrator.	
wksp_admin_role	true	Workspace Administrator Role	A built in role that identifies a user as a workspace administrator, and also provides more specific information about the application behavior for the agent.	
wksp_cntnr	true	Workspace Container	A workspace is the principle architectural structure in Numara FootPrints for storing and tracking information. A Workspace is a separate sub-database or work area within the system with its own fields, forms, options, workflow, settings and users. Most of the behaviour of the Workspace comes from the Container Abstract class, and only things that are specific to the Workspace are implemented here. For Example, Current FootPrints allows a single CMDB to be referenced from a Workspace, and a single Address book, yet these are listed as features for improvement. So convenience methods that get and set Container Group Relationship might be appropriate.	Cust1_FP1
wksp_option	true	Workspace Option		
prob_item	true	WorkTarget Item	A Work Target Item in a Service Portfolio container.	

Attribute/Column(s) of Entity/Table ":Item Shortname Balance"				
Attribute/Column Physical_Name	Attribute/Column Name	Comment	Logical Only	Null Option
item_id	Item Id	The ticket item id for this dynamic summary table that was generated for the item name.		Not Null
begin_date_hour_local	Begin Date Hour Local	The begin whole hour of the time period for which this ticket is unclosed at the last minute of the first hour through the last minute of the end hour. Joins to TIME DIM.		Not Null
end_date_hour_local	End Date Hour Local	The end whole hour of the time period for which this ticket is unclosed at the last minute of the first hour through the last minute of the end hour. Joins to TIME DIM.		Not Null
activated_ct	Activated Count	Indicates if the Activation Event occurred prior to the end of the period. A one or zero integer count flag for the Item, designed to be summed in a query. It is important to identify the ONE ROW in this table which has the correct count flag by date joining, so that summing the count flag will not double count. That is the method of high performance aggregation.		Not Null

resolved_ct	Resolved Count	Indicates if the Resolved Event occurred prior to the end of the period. A one or zero integer count flag for the Item, designed to be summed in a query. It is important to identify the ONE ROW in this table which has the correct count flag by date joining, so that summing the count flag will not double count. That is the method of high performance aggregation.		Not Null
unresolved_ct	UnResolved Count	Indicates if the Resolved Event had not occurred prior to the end of the period. This is the inverse of the Resolved Ct. and makes it easier to count UnResolved. A one or zero integer count flag for the Item, designed to be summed in a query. It is important to identify the ONE ROW in this table which has the correct count flag by date joining, so that summing the count flag will not double count. That is the method of high performance aggregation.		Not Null

Attribute/Column(s) of Entity/Table ":item_shortcode Event Sum"				
Attribute/Column Physical_Name	Attribute/Column Name	Comment	Logical Only	Null Option
item_id	Item Id	The automatically generated primary key of the : item_shortcode_event_sum table.		Not Null
event_datetime	Event DateTime	The exact event date and time in UTC. This is used to calculate exact times and durations. It is within the hour that is bound by the local hour.		Not Null
creatn_clock_hours_ct	Creation Clock Hours Count	The elapsed clock hours from creation to the activity date. This does not include the time spent in DOES NOT COUNT FOR TIME states.		Not Null
creatn_work_hours_ct	Creation Work Hours Count	The elapsed work hours from creation to the activity date. This does not include the time spent in DOES NOT COUNT FOR TIME states. Work hours are defined by the schedule actual period table.		Not Null
all_creatn_clock_hours_ct	All Creation Clock Hours Count	The elapsed clock hours from creation to the activity date. The status flag DOES NOT COUNT FOR TIME is ignored here.		Not Null
all_creatn_work_hours_ct	All Creation Work Hours Count	The elapsed work hours from creation to the activity date. Work hours are defined by the schedule actual period table. The status flag DOES NOT COUNT FOR TIME is ignored here.		Not Null
actvn_clock_hours_ct	Activation Clock Hours Count	The elapsed clock hours from activation to the activity date. This does not include the time spent in DOES NOT COUNT FOR TIME states.		Not Null

actvn_work_hours_ct	Activation Work Hours Count	The elapsed work hours from activation to the activity date. This does not include the time spent in DOES NOT COUNT FOR TIME states. Work hours are defined by the schedule actual period table.		Not Null
all_actvn_clock_hours_ct	All Activation Clock Hours Count	The elapsed clock hours from activation to the activity date. The status flag DOES NOT COUNT FOR TIME is ignored here.		Not Null
all_actvn_work_hours_ct	All Activation Work Hours Count	The elapsed work hours from activation to the activity date. The status flag DOES NOT COUNT FOR TIME is ignored here. Work hours are defined by the schedule actual period table.		Not Null
life_cycle_event_id	Life Cycle Event Id	A Foreign Key to the Life Cycle Event table.		Not Null
date_hour_local	Date Hour Local	A date time in UTC that corresponds to a whole hour date in the local timezone for the Date Hour Local. The Minutes portion of the date will usually be 00 but can be 30, 15, 45 in the case of half hour or quarter hour time zones. UTC never has daylight savings in effect.		Not Null

item_id	Item Id	A Foreign Key to the Item table.	true	Not Null

Physical Data Type

bigint

Attribute/Column(s) of Entity/Table "Assignment"

Attribute/Column Physical_Name	Attribute/Column Name	Comment	Logical Only	Null Option
asnmt_id	Assignment Id	The automatically generated primary key of the asgnmt table.		Not Null
item_defn_id	Item Definition Id	A Foreign Key to the Definition table. Identifies the Ticket Item that the assignments refer to. This is needed if the table is stored as a global table, or workspace table. If it is stored as an item level table, it may not be needed unless union queries are anticipated.		Null
team_id	Team Id	A Foreign Key to the Team table. The team which can indicate a team level assignment, or the team underneath which the technician is assigned. Examples "Level 1", "Triage", "Web Team".		Null
begin_date	Begin Date	The begin date of this assignment period, used to determine when a user was assigned.		Null
end_date	End Date	The end date of an assignment. Assignments are not deleted, they are ended so that the historical time period of assignment can easily be queried and reported. If the assignment is not null, then the assignee no longer appears in the current list of assignees.		Null

asgnmt_type_id	Assignment Type Id	A Foreign Key to the Assignment Type table. This is a flexible means of recording the assignment type based on an enum.		Null
app_user_id	Application User Id	A Foreign Key to the Application User table. The technician assignee.		Null
cc_email_addr	CC Email Address	Cannot be used with TeamId, App_user_id, can only be used with CC Assignment. This is an email address.		Null
sort_order	Sort Order	The display order of the assignment can be preserved with this field if desired.		Null
item_id	Item Id	A Foreign Key to the Item table.	false	Null
is_team	Is Team	Special clarifying field of "Is Team Level Assignment" to state that the Team does not have to be immediately resolved to a Team+ Individual.		Not Null
delete_txn_id	Delete Transaction Id	A unique incremental transaction identifier that indicates a soft delete. The id is generated via id generation, and may or may not correspond to the audit trail transaction id. This method of marking the soft delete allows for a unique index to be created on the Workspace Definition Id, Team Name, and Delete Transaction Id to enforce no duplicates in the live copies, and it allows multiple soft deleted rows with the same team name. ** This pattern of soft delete may be helpful for the assignment in order to allow unique indexes. It seems to be redundant to end_date of the assignment. There is no semantic difference between ending an assignment and logically deleting it, it was valid for some period of time. We do not have a feature that allows for hard or soft deletion of historical assignments.		Null
field_id	Field Id	A Foreign Key to the Definition table. Indicates the field definition for the assignees. This would allow multiple assignees type fields to be used, for example Primary Assignee 1, Primary Assignee 2, Regular Assignees.		Null

Attribute/Column(s) of Entity/Table "Configuration Setting"

Attribute/Column Physical_Name	Attribute/Column Name	Comment	Logical Only	Null Option
cfg_ctgy_id	Configuration Category Id	A Foreign Key to the Configuration Category table.		Not Null
cfg_setting_const	Configuration Setting Constant	The name of the Configuration Setting.		Null
dflt_setting_label	Default Setting Label	The name of the Configuration Setting.		Null
dflt_setting_descr	Default Setting Description	The description of the purpose and usage of the configuration setting. This description serves for documentation, and will be used to help develop UI strings for the Label, ToolTip, HelpText etc. of the UI for the configuration setting.		Null
cfg_setting_id	Configuration Setting Id	The automatically generated primary key of the cfg_setting table.		Not Null
agent_only	Agent Only	identifies a setting as agent use only. This prevents customer role, customer user profile usage of the property .		Null
unique_user_only	Unique User Only	identifies a setting as unique user only so it does not get used in Roles or Agent Preference Templates. There are certain settings in that should not be shared across individuals, and there are also the direct properties of the former USERS table which will now be configuration settings so that they can be used in templates and user profiles such as the Customer Auto Add Profile.		Null
cfg_val_list_id	Configuration Value List Id	A Foreign Key to the Configuration Value List table.		Null
val_type_cd	Value Type Code	The data type for a Configuration Setting. The choices are 'S' string, 'D' date, 'T' text, 'L' Long, 'R' real, and 'A' for any type.		Not Null
cfg_list_type_name	Configuration List Type Name	The name of the Configuration List Type.		Null
spec_class_name	Specification Class Name	The value of a Configuration Setting, stored as a string.		Null
cfg_is_val_mapped	Configuration Is Value Mapped	Indicates if Configuration Is Value Mapped.		Null

Attribute/Column(s) of Entity/Table "Schedule Actual Period"				
Attribute/Column Physical_Name	Attribute/Column Name	Comment	Logical Only	Null Option
schd_actual_period_id	Schedule Actual Period Id	The automatically generated primary key of the schd_actual_period table.		Not Null

begin_date	Begin Date	Begin Date and Time of the work hour period.		Null
end_date	End Date	End Date and Time of the work hour period.		Null
work_durn_in_mins	Work Duration In Minutes	Work Time duration in minutes. This is the number of work minutes within the begin and end date of the period, which is equal to the end date minus the begin date, because the work periods can be sparsely populated. This value can be summed to get the total work minutes for a date range. If a date marker requested falls within the begin and end date of the actual period, then the minutes from the marker date and the begin/end point must be subtracted from this number.		Null
schd_id	Schedule Id	A Foreign Key to the Calendar that was used to generate the actual periods.	false	Not Null
cum_work_durn_in_mins	Cumulative Work Duration In Minutes	Cumulative Work Time duration in minutes. This is the number of work minutes from the actual first period to the end of the current actual period as calculated by a running total or cumulative sum of the Work Duration field. Because the work periods will be sparsely populated, the hard dates cannot be subtracted to yield Work Duration Difference. However, this Cumulative Work Duration can be subtracted to get the Work Duration difference. If a date marker requested falls within the begin and end date of the actual period, then the minutes from the marker date and the begin/end point must be subtracted from this number.		Null
begin_date_utc_s	Begin Date UTC S	A string version of the UTC date that is used in order to error correct JDBC/Hibernate persistence of the date which produces errors on Daylight Savings Time boundaries.		Not Null
end_date_utc_s	End Date UTC S	A string version of the UTC date that is used in order to error correct JDBC/Hibernate persistence of the date which produces errors on Daylight Savings Time boundaries.		Not Null

Attribute/Column(s) of Entity/Table "Snapshot Configuration Setting Value"

Attribute/Column Physical_Name	Attribute/Column Name	Comment	Logical Only	Null Option
cfg_setting_val_id	Configuration Setting Value Id	The automatically generated primary key of the snapshot_cfg_setting_val table.		Not Null
cfg_setting_id	Configuration Setting Id	A Foreign Key to the Snapshot Configuration Setting Value table.		Not Null
val_type_cd	Value Type Code	The data type for a Snapshot Configuration Setting Value. The choices are 'S' string, 'D' date, 'T' text, 'I' integer.		Not Null
string_val	String Value	The value of a Snapshot Configuration Setting Value, stored as a string.		Null
text_val	Text Value	The value of a Snapshot Configuration Setting Value, stored as a long text object.		Null
real_val	Real Value	The value of a Configuration Setting Value stored as a real.		Null
long_val	Long Value	The value of a Configuration Setting Value stored as Long.		Null
date_val	Date Value	The value of a Snapshot Configuration Setting Value, stored as a date.		Null
boolean_val	Boolean Value	The value of a Configuration Setting Value stored as Boolean.		Null
int_val	Int Value	The value of a Configuration Setting Value stored as Int.		Null
owner_id	Owner Id	A Foreign Key to the Owning instance in either the Definition, Definition Version, Role, or User Profile tables.	false	Not Null
val_map_key	Value Map Key	The value of a Snapshot Configuration Setting Value, stored as a string.		Null
cfg_setting_owner_type_name	Configuration Setting Owner Type Name	The name of the Snapshot Configuration Setting Value.		Null
cntr_snapshot_id	Container Snapshot Id	A Foreign Key to the Container Snapshot table.		Not Null

Attribute/Column(s) of Entity/Table "Time Zone Local Hour"				
Attribute/Column Physical_Name	Attribute/Column Name	Comment	Logical Only	Null Option
begin_date_hour_utc	Begin Date Hour UTC	A date whole hour in the local timezone for the Begin Date Hour UTC. The Minutes portion of the date will always be 00. It is not stated whether daylight savings is in effect.		Not Null
end_date_hour_utc	End Date Hour UTC	A date whole hour in the local timezone for the End Date Hour UTC. The Minutes portion of the date will always be 00. It is not stated whether daylight savings is in effect.		Not Null
begin_date_hour_local	Begin Date Hour Local	A date time in UTC that cooresponds to a whole hour date in the local timezone for the Begin Date Hour Local. The Minutes portion of the date will usually be 00 but can be 30, 15, 45 in the case of half hour or quarter hour time zones. UTC never has daylight savings is in effect,		Not Null
end_date_hour_local	End Date Hour Local	A date time in UTC that cooresponds to a whole hour date in the local timezone for the End Date Hour Local. The Minutes portion of the date will usually be 00 but can be 30, 15, 45 in the case of half hour or quarter hour time zones. UTC never has daylight savings is in effect,		Not Null

begin_is_daylight_savings	Begin Is Daylight Savings	Flag indicating if daylight savings is in effect for the begin time. This helps identify the special hours that are missing or duplicated during daylight savings days.		Not Null
time_zone_region_id	Time Zone Region Id	An alternate Key to the Time Zone Region table, which is arbitrarily calculated and assigned by FootPrints. The reason for this is performance of the Foreign Key join to large numbers of rows. There is no suitable short data length key available in a published standard data source.		Not Null
time_zone_local_hour_id	Time Zone Local Hour Id	The automatically generated primary key of the time_zone_local_hour table		Not Null
begin_date_hour_local_s	Begin Date Hour Local S	A string version of the local date that is used in order to error correct JDBC/Hibernate persistence of the date which produces errors on Daylight Savings Time boundaries.		Not Null
end_date_hour_local_s	End Date Hour Local S	A string version of the local date that is used in order to error correct JDBC/Hibernate persistence of the date which produces errors on Daylight Savings Time boundaries.		Not Null
begin_date_hour_utc_s	Begin Date Hour UTC S	A string version of the UTC date that is used in order to error correct JDBC/Hibernate persistence of the date which produces errors on Daylight Savings Time boundaries.		Not Null
end_date_hour_utc_s	End Date Hour UTC S	A string version of the UTC date that is used in order to error correct JDBC/Hibernate persistence of the date which produces errors on Daylight Savings Time boundaries.		Not Null
end_is_daylight_savings	End Is Daylight Savings	Flag indicating if daylight savings is in effect for the end time. This helps identify the special hours that are missing or duplicated during daylight savings days.		Not Null
